VOL.1

大問I・II 長文読解
分析とオリジナル問題

READING COMPREHENSION — ANALYSIS & ORIGINAL PASSAGES

- 4年×2題＝8題を全分析
- 長文 各1,000語級・段落番号つき設問
- 設問6タイプ×誤答6パターン
- タイプ別トレーニング18問
- オリジナル実戦長文8題・80問
- 言い換え辞典80

立教大学文学部（2/11）の大問I・IIは、1,000語前後の論説・科学記事に、段落番号つきの英語の設問が本文の順に9〜10問並ぶ。

本書は2023〜2026年度の8題76問を設問タイプと誤答の型に分解し、同じ形式・同じ難度のオリジナル長文8題で「1段落読んだら1問解く」読み方を身につける。

本書の使い方

1. **PART 0 で「型」を頭に入れる。**設問の6タイプと誤答の6パターンは、PART 1・2 の解説でも同じ名前で使う。
2. **PART 1 でタイプ別に練習する。**短い英文（約200語）に同じタイプの設問が3問。解説の「言い換えの見抜き方」を自分の言葉で説明できるまで読み込む。
3. **PART 2 は本番と同じ形式で解く。**1題20分。解答解説は改ページ後にある。「根拠」「言い換え」「誤答の型」の3点を確認し、間違えた設問は誤答の型を記録する。
4. **巻末の言い換え辞典とチェックリスト**は、直前期の見直し用。

本書の英文・設問はすべて本書のためのオリジナルである。過去問の本文は掲載せず、分析のために設問文や下線部を短く引用するにとどめた。演習の英文に登場する一部の人物（翻訳者・研究者・写真家など）と一部の調査は、作問のために設定した架空のものである。試験時間は問題冊子に記載がないため「75分想定（募集要項で要確認）」とした。

PART 0 — ANALYSIS

長文の徹底分析 —— 4年×2題＝8題から見える「型」

2023〜2026年度 文学部（2/11）大問I・II ／ 76問を全分類

立教大学文学部（2/11）の大問I・IIは、4年間まったく同じ骨格で出題されている。**1,000語前後・8〜12段落の英米の論説や科学記事に、英語の設問が9〜10問。設問は段落番号つきで本文の順に並び、文頭を与えて選択肢で文を完成させる形**。本書は、この「変わらない型」を分析し、同じ型のオリジナル問題で練習する。過去問の本文はここには載せない。テーマ・構成・設問の型の分析と、設問文・下線部の短い引用だけを扱う。

0-1 8題の一覧 —— テーマ・分量・設問構成

年度・大問	テーマ	ジャンル	語数	段落	設問	注
2023 I	カーリングの起源と国際化	説明文（スポーツ史・文化交流）	約1,200	8	9＋和訳	1語
2023 II	SNSと不安の悪循環（FOMO）	論説（心理学・研究紹介）	約1,250	8	10	なし
2024 I	ChatGPT と人間の知性・言語	新聞オピニオン（言語学・認識論）	約950	9	10	2語
2024 II	野生動物と炭素貯留・保全	一人称の論説（保全団体の長）	約830	10	9＋和訳	2語
2025 I	音楽は何のためにあるか	科学記事（研究紹介リレー型）	約1,050	12	10	3語
2025 II	コロナ禍と時間感覚	書評を兼ねた雑誌記事	約1,100	11	9＋和訳	3語
2026 I	人文学・文化は人を良くするか	一人称の論説エッセイ	約1,050	12	10	あり
2026 II	気候変動の帰属科学と気候正義	科学者の一人称論説	約1,180	10	9＋和訳	あり

語数は本書の目算。2026年度IIの選択問題数は本書の集計（9問）による。和訳は2023年のみ大問I、2024年以降は大問IIに置かれている。

設問タイプの内訳（本書の分類）

年度・大問	下線語句	段落内容	研究・人物	比喩・例示	EXCEPT	タイトル・結論	計
2023 I	2	4	0	1	1	1	9
2023 II	3	2	1	1	1	2	10
2024 I	1	4	0	4	0	1	10
2024 II	1	2	3	1	1	1	9
2025 I	1	0	3	2	2	2	10
2025 II	1	0	4	3	1	0	9
2026 I	1	4	3	0	1	1	10

年度・大問	下線語句	段落内容	研究・人物	比喩・例示	EXCEPT	タイトル・結論	計
2026 II	0	6	1	1	0	1	9
合計	**10**	**22**	**15**	**13**	**7**	**9**	**76**

8題から言える5つの事実

- **分量は1題約1,000語、2題で約2,000〜2,400語。**最短は2024年IIの約830語、最長は2023年IIの約1,250語。
- **設問は全問英語、全問「文完成型」の4択（イ〜ニ）。**疑問文の形の設問はほとんどない。
- **段落番号つき・本文の順。**”(paragraph 4)” “According to paragraph 7,” “Based on paragraphs 6 and 7,” の形で、どこを読めばよいかが設問に書いてある。
- **ほぼ毎題出るのは「下線語句」「EXCEPT」「タイトル・結論」。**2024年以降は研究・人物の主張を問う設問が増えている（研究紹介リレー型の素材が増えたため）。
- **正解は本文の言い換え、誤答は本文の語の流用。**本文の語がそのまま並ぶ選択肢ほど危ない。

0-2 設問タイプ6分類と「設問文の英語の型」

設問文の書き出しを見れば、何を問われているか、本文のどこを読めばよいかが分かる。次の6タイプの「型」を覚えておけば、設問の先読みにかかる時間は1題1分半で済む。

タイプ1　下線語句の意味（4年で10問）

設問文の型	過去の出題（下線 → 正解）
The underlined word “X” (paragraph n) is closest in meaning to	eroding → damaging ／ recognition → fame ／ futile → ineffective ／ conjecture → suppose ／ sequester → remove ／ accomplished → skilled ／ corroding → falling apart ／ leg up → advantage
In paragraph n, the underlined expression “X” describes a tendency to	make upward comparisons → feel inferior to others
The underlined phrase “X” (paragraph n) refers to the action of	digitally disconnected → suspending the use of social media

狙い：多義語の**文脈上の意味**。recognition　を「認識（perception）」で選ぶと誤り、文脈上は「名声（fame）」。**罠**：①第一義・別義　②字面の連想（upward　→　upwardly　mobile、corroding　→　getting difficult）。**解き方**：下線語を空欄にして前後から意味を予測し、選択肢を代入する。下線語の直後に言い換え（同格・コロン・分詞構文）があることが多い。

タイプ2　段落内容（4年で22問・最多）

設問文の型	ポイント
According to paragraph n, ...	段落の主題文（冒頭文か、Yet / However の直後）
In paragraph n, the author argues / points out that	筆者の主張。引用や他人の意見と区別する
As discussed in paragraph n, one reason for ... is that	because / since / so that ／ This is why の前後
The first paragraph states that ／ The passage states that ... because	第1段落は問題提起。結論は保留されていることが多い
Based on paragraph n, the greatest problem with X is its failure to	最上級・否定語（deepest flaw, failure）の箇所
The author of the passage would most likely agree that	筆者の立場からの推論。本文にない極端な主張は×

タイプ3　研究・人物の主張（4年で15問・増加中）

設問文の型	過去の出題例
According to the study conducted at ..., ...	2025 I：無表情の顔が音楽によって楽しげにも悲しげにも見えた研究
The results of X's survey concerning ... indicate that	2025 I：音楽の好みと性格の国際調査
Researchers from X have found that ...	2025 I：「経験への開放性」と frisson（ぞくっとする快感）
A new article in *Nature* (paragraph 3) indicates that	2024 II：野生動物と炭素貯留
X (paragraph n) claims that the primary value of ... is that	2026 I：文学の価値をめぐる人物の主張
The findings of the "X database" (final paragraph) indicate that	2025 II：孤立と時間感覚

罠：別の研究の数字や方法の付け替え（frisson を経験する人の割合を「開放性」の説明に付け替える）、比較の向きの反転。**解き方**：研究は「誰が・何をして・何が分かったか」の3点、比較は矢印（＞・＜）でメモする。

タイプ4　比喩・例示・引用の意図（4年で13問）

設問文の型	過去の出題例
X gives the example of ... (paragraph n) in order to suggest that	2025 I：母親のハミングの例 → 音楽は言語より前に生まれた
X uses the metaphor of a "..." to describe how ...	2025 I："a toy for the brain"

設問文の型	過去の出題例
The phrase “...” (paragraph n) is used to explain / imply that	2024 I：“infinite use of finite means” ／ 2025 II：“social construct”
The passage mentions “...” (paragraph n) in order to describe	2024 I：“error correction”
Paragraph 2 is included for the general reader because	2023 I：競技の説明段落の存在理由
X’s statement that “...” is meant as a description of	2025 II：“life stopped, but time continued”

罠：比喩の字義どおりの選択肢（toy → おもちゃ）、比喩の一部の性質だけを取った選択肢。**解き方**：字義の選択肢をまず消し、比喩の「どの性質」が借りられているかを、直後の説明文から特定する。

タイプ5　EXCEPT（4年で7問）

設問文の型	正解（＝本文に合わないもの）の作り方
Based on paragraph n, all of the following statements are true about ... EXCEPT that	2024 II：always を入れた極端化 ／ 2026 I：hard sciences と humanities の役割の入れ替え
According to paragraph n, all of the following statements are true EXCEPT that	2023 I：「スイープ禁止」を「スイープ必須」に反転
Paragraph n mentions all of the following points EXCEPT	2023 II：本文と逆の内容
According to the X study, all of the following ... EXCEPT that	2025 I：本文にない「似た子ども同士の親密な関係」

解き方：4肢すべてに ○× を書く。本文に合う3肢は平易な語に言い換えられているので、言い換えに気づけないと○を×と誤認する。2025年IIでは not so much money as power という構文の理解がそのまま EXCEPT の正解（time is money）になった。

タイプ6　タイトル・結論（4年で9問）

設問文の型	ポイント
The most appropriate title for this passage is	2023〜2025年は毎年。正解は「本文全体の問い」をそのまま題にした素直な形
The concluding section of the passage (paragraphs 11 and 12) suggests that ... because	2025 I：結論部の内容
The passage suggests that ／ Based on the conclusion of the passage, ...	2023 II・2026 II：全体からの推論

罠：範囲が狭い（1段落だけの話題）／広すぎる／論調が逆（筆者が否定した通説）。**解き方**：第1段落の問いと最終段落の答えを1行で書いてから選ぶ。

0-3 正解選択肢の「言い換え」8パターン

正解の選択肢が本文と同じ語句で書かれることはまずない。出題者は本文を**抽象化・平易化**して正解を作る。次の8パターンを知っていれば、正解が「本文と違う語」で書かれていても見抜ける。

パターン	本文 → 正解選択肢（過去問の例）	見抜き方
①上位語化	cultural exchange programs → intercultural communication（2023 I）	具体的な名詞をまとめる語を探す
②具体例の一般化	種をまく・海藻を茂らせる・植物プランクトンを刺激する → stimulating the growth of plants（2024 II）	列挙された例の共通点を言葉にする
③平易化	viewing themselves unfavorably in relation to others → feel inferior to others（2023 II）	難語を中学語で言い直す
④比喩→字義	sucked me into a trance → transported … into an intense connection（2026 I）	比喩が借りている性質を字義で言う
⑤否定の言い換え	what is not the case and what could and could not be the case → what might be true and what is not possibly true（2024 I）	not・could not の範囲を正確に追う
⑥構文の転換	not so much money as power → (EXCEPT) time is money（2025 II）	not A but B ／ not so much A as B の A と B を区別する
⑦比例・比較の書き換え	孤立が少ないほど過去と未来が近い → isolation can make events feel far apart（2025 II）	the 比較級, the 比較級 を逆から言い直す
⑧本文語の再利用	The results were curious → have some curious similarities（2025 I）	まれに本文の語がそのまま正解に残る。中身の関係が正しいかで判断

0-4 誤答の6パターン —— 年度メモの実例

誤答は4年間、同じ6つの作り方で作られている。選択肢を読んだら、どれに当たるかを考える。本書の解説では、誤答に次の6つの記号【　】をつけている。

型	作り方	過去問の実例（誤答の選択肢）
①寄せ集め	本文の語を集めて、ありもしない関係を作る	”it is used as a practical method of hunting and defense”（2025 I：hunt / defend の語だけ借用）／ 2023 I：直前の段落の dispute（争い）を流用
②極端語	always, only, completely, instantly で一般化しすぎる	”new animal species always improve environmental health”（2024 II）／ “completely cure a variety of mental illnesses”（2025 I）
③付け替え	別の研究・数字・年代・人物と結びつける	frisson の「人口の約3分の2」を「開放性」に付け替え（2025 I）／ 1511年の記述を fifteenth century に（2023 I）

型	作り方	過去問の実例（誤答の選択肢）
④逆	本文と反対の内容	”wheelchair curling requires players to sweep the ice”（2023 I：本文は禁止）／“is quite able to understand and explain everything”（2024 I）
⑤焦点ずれ	部分的には正しいが、設問の問いに答えていない	”affects the brain in a way that is related to drug use”（2025 I：本文は「薬物に似た作用」で、創造性の部分を落としている）
⑥すり替え	2つの概念・主体の役割を入れ替える	”the hard sciences primarily engage our subjective experiences”（2026 I：人文学の役割を自然科学に）／筆者が後で否定した当初の懸念を筆者の主張として示す（2024 II）

最頻出は①寄せ集めと④逆

年度メモに記録された誤答を見ると、**最も目立つのは寄せ集めと逆**で、極端語・付け替え・すり替え・焦点ずれがそれに続く。「本文に出てきた語が入っている」は正解の根拠にならない。むしろ**本文の語をそのまま含む選択肢は、まず寄せ集めを疑う**のが立教文学部の長文の鉄則である。

0-5 テーマの系統と次年度予想

系統	過去の素材	次に出そうなテーマ（本書の演習）
A 文化・芸術・人文学	カーリング史（2023 I）／音楽の機能（2025 I）／人文学の価値（2026 I）	翻訳と言語の多様性（演習1）・美術館の役割（演習2）・図書館とデジタル化（演習4）・写真（演習7）
B 心・認知・時間	SNSと不安（2023 II）／AIと人間の言語（2024 I）／コロナ禍と時間感覚（2025 II）	記憶と物語（演習3）・睡眠と夢（演習5）・散歩と思考（演習8）
C 環境・社会正義	野生動物と炭素（2024 II）／気候正義（2026 II）	方言と言語アイデンティティ（演習6：言語と権力・公正）

4年とも**2題のうち1題は文化・人文系、もう1題は心理・科学・社会系**という組み合わせで、同じ系統が2題そろった年はない。素材の形は2種類ある。①研究者・研究を次々に紹介する**研究紹介リレー型**（2023 II、2025 I・II）と、②筆者が一人称で主張する**論説型**（2024 I・II、2026 I・II）。2027年度も**「人文・文化系の論説」＋「心理・科学系の研究紹介記事」**という組み合わせが本命と見る。とくに**言語・翻訳・読書・記憶・睡眠・芸術鑑賞**は文学部の関心と重なり、研究紹介にも論説にもしやすい。本書の演習8題はこの予想に沿って作った。

0-6 解法：段落番号つき設問を使った「1段落読んだら1問解く」

設問が段落番号つき・本文の順に並ぶ以上、全文を読んでから設問に戻る読み方は時間の無駄である。**設問を「地図」として使い、読みながら解く**。

1. **設問文（stem）だけを先に読む（約1分半）。**選択肢は読まない。段落番号・下線語・引用符の語句・人名を本文中で丸で囲み、「第3段落→研究」「第5段落→EXCEPT」のように問題用紙の余白にメモする。
2. **第1段落を読み、問題提起を1行でつかむ。**”what, exactly, is a museum for?” のような問いが第1段落にあれば、それがタイトル問題の答えの半分になる。

3. **設問で指定された段落まで読んだら、その場で解く。**根拠は「その段落の中」にある。段落番号が書かれていない設問も、順番から段落を推定できる（前後の設問の段落番号の間にある）。
4. **選択肢は「消去」から入る。**①寄せ集め・④逆・②極端語を先に消し、残った2つを本文の該当文と1語ずつ照合する。
5. **迷ったら印をつけて先に進む。**次の段落に解決の手がかりがあることも多い。1問に2分以上かけない。
6. **最終段落を読んだらタイトル・結論問題。**第1段落の問いと最終段落の答えを1行で書いてから選ぶ。

> **段落番号のない設問の位置の推定**
>
> ”The passage states that …” “One reason for … was” のように段落番号がない設問も、前後の設問が「paragraph 3」と「paragraph 6」なら第4〜5段落にある。人名・研究名・引用符の語句がキーワードとして必ず入っているので、それを本文中で探せばよい。

0-7 時間戦略：1,000語を約20分で処理する（75分想定）

試験時間は問題冊子に書かれていないので、本書では**75分想定（募集要項で要確認）**として配分を示す。

大問	内容	目標時間	メモ
I	長文・4択9〜10問	20分	先読み1.5分＋読みながら解答17分＋タイトル・見直し1.5分
II	長文・4択9問＋和訳	22分	和訳は下線部に来たらその場で下書き（2分）
III	誤り指摘8問	8分	1問1分
IV	会話文6問	6分	1問1分
V	1語補充5か所	10分	全文を読んでから記述
見直し	マーク確認・保留問題	9分	長文の保留問題を優先

なぜ20分で足りるのか

1,000語を1分あたり**130語**で読むと約8分。設問10問を1問あたり**約50秒**で解くと約8分。先読みとタイトル・見直しに約3分。合計で約19分になる。逆に言えば、**読む速度が1分100語を切ると、それだけで10分を超え、20分では収まらない**。本書の演習1〜8は各1,000語前後なので、ストップウォッチを使って次の手順で練習すること。

1. 1回目：時間無制限で解き、解説の「言い換え」と「誤答の型」を確認する。
2. 2回目（1週間後）：**20分**で解く。時間内に終わらなければ、どの段落で止まったかを記録する。
3. 3回目：本文だけを**8分**で音読・黙読し、段落要旨表を見ずに各段落を1行で言えるか確認する。

> **20分を超えそうなときの捨て方**
>
> 捨てるならEXCEPT問題である。4肢すべての照合が必要で、1問に最も時間がかかる。下線語の問題は前後2文で解けるので、最後まで残す。タイトル問題は第1段落と最終段落だけで答えの見当がつくので、時間切れ直前でも必ずマークする。

PART 1 — TRAINING BY QUESTION TYPE

設問タイプ別トレーニング

6タイプ × 短文（約200語） × 3問 ＝ 18問

各トレーニングは、1つのタイプの設問だけを3問集めた短い英文である。本番の長文では10問のうち1〜4問しか出ない型も、ここでまとめて練習しておけば、本番で同じ型の設問を見たときに解き方がすぐ浮かぶ。設問文の書き出しは本番と同じ英語の型にそろえてある。解いたら、解説の**「言い換えの見抜き方」**を必ず読むこと。正解を当てることより、正解が本文のどの表現を言い換えたものかを説明できることのほうが大事である。

No.	タイプ	英文のテーマ	語数
1	下線語句の意味	手紙を書く文化の復活	167
2	段落内容	都市のベンチ	191
3	研究・人物の主張	退屈の心理学	167
4	比喩・例示の意図	修理する文化	163
5	EXCEPT 問題	茶の歴史	162
6	タイトル・結論	再読の楽しみ	200

トレーニング1　下線語句の意味 —— 手紙を書く文化の復活

下線語は**多義語の「文脈上の意味」**を問う。辞書の第一義で選ぶと、別義・字面の連想で作った誤答に吸い込まれる。

次の文を読み、下記の1〜3それぞれに続くものとして、本文の内容ともっともよく合致するものを、各イ〜ニから1つずつ選べ。（約167語）

[1] In an age of instant messages, the handwritten letter might seem hopelessly dated. Few young people own writing paper, and many have never bought a stamp. Yet in several countries, letter-writing clubs have quietly attracted new members, most of them in their twenties.

[2] Members explain that the slowness of a letter is precisely its appeal. A message sent by phone demands an immediate reply; a letter allows both writer and reader time to think. One member describes letter writing as a way to check her habit of responding without reflection. Because she cannot delete a sentence without leaving a mark, she says, she chooses her words with far greater care.

[3] Letters also bear traces of the people who wrote them: a coffee stain, a crossed-out word, handwriting that grows larger with excitement. Such details make a letter feel less like information and more like a visit. It is perhaps no accident that people who delete thousands of emails without a second thought keep their letters for decades.

(Original passage written for this book)

1　The underlined word “dated” (paragraph 1) is closest in meaning to

イ　marked with a date.
ロ　reliable.
ハ　expensive.
ニ　old-fashioned.

2　The underlined word “check” (paragraph 2) is closest in meaning to

イ　restrain.
ロ　examine.
ハ　pay for.
ニ　mark as correct.

3　The underlined word “bear” (paragraph 3) is closest in meaning to

イ　tolerate.
ロ　carry.
ハ　give birth to.
ニ　support the weight of.

解答・解説　トレーニング1

1　正解 ニ　下線語句の意味

根拠　“In an age of instant messages” との対比、“hopelessly”（どうしようもなく）が修飾。

言い換え　時代の対比（instant messages ↔ handwritten letter）から「時代遅れの」。

イ　別義・連想　dated の字面（日付のついた）。手紙に日付はあるが、文脈は「即時メッセージの時代に」。

ロ　別義・連想　無関係。

ハ　別義・連想　stamp からの連想。

2　正解 イ　下線語句の意味

根拠　目的語は her habit of responding without reflection（よく考えずに返事をする癖）。直後に「書いたら消せないので言葉を慎重に選ぶ」。

言い換え　悪い癖を check する → 抑える。check the spread of a disease と同じ「食い止める」の意味。

ロ　別義・連想　check の第一義「調べる」。目的語 her habit と合わない。

ハ　別義・連想　「小切手」の連想。

ニ　別義・連想　「チェックマーク」の連想。

3　正解 ロ　下線語句の意味

根拠　コロン以下に traces の具体例（コーヒーのしみ、消した語、興奮で大きくなる字）が並ぶ。

言い換え　bear traces of ＝ ～の跡をとどめている。bear a name / bear a resemblance と同じ「（しるし・特徴を）帯びている」。

イ　別義・連想　can’t bear（耐えられない）の別義。

ハ　別義・連想　bear a child の別義。

ニ　別義・連想　「重さを支える」の別義。

言い換えの見抜き方 ── 下線語句の意味

- **手順1：下線語を空欄にして読む。**前後だけで「入るべき意味」を日本語で予測する（dated → 時代遅れ、check → 抑える、bear → とどめる）。
- **手順2：品詞と目的語を確認する。**check の目的語が habit なら「調べる」は不自然。bear の目的語が traces なら「耐える」は不自然。2024年の sequester も「炭素を」という目的語から remove が決まった。
- **手順3：選択肢を下線部に代入して読み直す。**代入して文が成立し、前後の文と論理がつながるものが正解。
- **誤答の作り方を知っておく。**①第一義（examine）②別義（tolerate, give birth to）③字面の連想（marked with a date）④話題からの連想（expensive）。過去問でも recognition → perception（別義）、corroding → getting difficult（連想）が誤答に置かれた。

トレーニング2　段落内容 —— 都市のベンチ

"According to paragraph n, ..." 型。答えは**その段落の主題文**（冒頭文か、However / Yet の直後）にあり、正解はそれを抽象化した文になる。

次の文を読み、下記の1〜3それぞれに続くものとして、本文の内容ともっともよく合致するものを、各イ〜ニから1つずつ選べ。（約191語）

[1] Few pieces of urban design receive less attention than the public bench. Yet for older residents, the presence or absence of benches can decide whether a trip to the shops is possible at all. A person who can walk for only ten minutes without resting may simply stay at home if there is nowhere to sit along the way.

[2] In recent years, however, many cities have removed benches or replaced them with seats that are deliberately uncomfortable, such as narrow, sloping ledges or seats divided by metal bars. The official aim is usually to prevent people from sleeping or gathering in public spaces. Critics call this “hostile architecture,” arguing that measures designed to exclude a few people end up making the city less welcoming for everyone.

[3] Some cities have begun to move in the opposite direction. One European capital has set a goal of placing a bench every few hundred meters along major walking routes, and planners there report that older people are now visiting parks and shops more often. A bench, it turns out, is not merely a piece of furniture. It is an invitation to remain in public life.

(Original passage written for this book)

1　According to paragraph 1, benches matter to some older residents because

イ　they would rather sit outside than go shopping.
ロ　benches are the most important part of urban design.
ハ　they can walk for only ten minutes a day.
ニ　places to rest can determine whether they are able to go out at all.

2　In paragraph 2, critics of “hostile architecture” argue that

イ　uncomfortable seats successfully prevent people from gathering.
ロ　designs meant to keep certain people away make public spaces less pleasant for all.
ハ　cities should remove all of their benches.
ニ　metal bars make benches more comfortable.

3　According to paragraph 3, after one European capital added more benches,

イ　fewer people walked along major routes.
ロ　older residents began to visit parks and shops more frequently.
ハ　planners removed benches from parks.
ニ　benches were used mainly by tourists.

解答・解説　トレーニング2

1　正解 ニ　段落内容

根拠　“the presence or absence of benches can decide whether a trip to the shops is possible at all.”

言い換え　the presence or absence of benches → places to rest ／ whether a trip to the shops is possible → whether they are able to go out

イ　寄せ集め　sit と shops を寄せ集めて好みの話にした。

ロ　極端語　本文は「最も注目されない」と言う。most important は逆かつ極端。

2　正解 ロ　段落内容

根拠　“measures designed to exclude a few people end up making the city less welcoming for everyone.”

言い換え　designed to exclude a few people → meant to keep certain people away ／ less welcoming for everyone → less pleasant for all

イ　焦点ずれ　「公式の目的」の説明で、批判者の主張ではない。焦点ずれ。

ハ　極端語　逆。all も極端。

ニ　逆　deliberately uncomfortable と逆。

3　正解 ロ　段落内容

根拠　“planners there report that older people are now visiting parks and shops more often.”

言い換え　more often → more frequently ／ older people → older residents（同義語の1語置換）

イ　逆　逆。

ハ　逆　逆。

ニ　寄せ集め　記述なし。capital から観光客を連想させた。

言い換えの見抜き方 —— 段落内容

- **段落の「骨格語」に印をつける。**Yet / however / but（転換）、in other words（言い換え）、for example（具体例）、It turns out（結論）。第1段落は Yet、第2段落は however、第3段落は opposite direction が骨格。
- **設問の主語を本文で探す。**第2問は critics が主語。同じ段落の The official aim（公式の目的）は別の主語の話なので、そこから作った選択肢は焦点ずれ。
- **正解は1語ずつ置き換えた「同義文」か、具体例を束ねた「抽象文」。**本文の語がそのまま並ぶ選択肢は、むしろ寄せ集めを疑う。
- **数字は「何の数字か」を必ず確認する。**「10分」は休まずに歩ける時間であって、1日の歩行時間ではない。

トレーニング3　研究・人物の主張 —— 退屈の心理学

"According to the study ..." "X claims that ..." 型。研究は**「誰が・何をして・何が分かったか」**、人物は**「誰の・どの発言か」**で照合する。

次の文を読み、下記の1〜3それぞれに続くものとして、本文の内容ともっともよく合致するものを、各イ〜ニから1つずつ選べ。（約167語）

[1] Boredom has long been treated as a trivial complaint, but psychologists now take it seriously. In one well-known experiment, participants were left alone in an empty room for up to fifteen minutes with nothing to do except press a button that gave them a mild electric shock. A surprising number chose to shock themselves rather than simply sit with their thoughts.

[2] Other researchers have found that boredom can have benefits. In a study conducted in Britain, participants who first completed a dull task, copying numbers from a telephone directory, later produced more imaginative ideas on a creativity test than those who had skipped the dull task. Boredom, the researchers suggested, pushes the mind to search for stimulation of its own.

[3] The philosopher Anna Kerr takes a broader view. Boredom, she argues, is “a signal, not a sickness”: like hunger, it tells us that something is missing, and the right response is not to silence it with a screen but to ask what we actually want to do.

(Original passage written for this book)

1　According to the experiment described in paragraph 1, many participants

イ　refused to stay in the room for fifteen minutes.
ロ　enjoyed sitting quietly with their thoughts.
ハ　preferred an unpleasant sensation to doing nothing at all.
ニ　were given shocks without their permission.

2　The study conducted in Britain (paragraph 2) indicates that

イ　doing a boring task beforehand can lead to more creative thinking.
ロ　copying numbers is an effective way to remember them.
ハ　people who skipped the dull task were more imaginative.
ニ　boredom makes people less likely to seek stimulation.

3　Anna Kerr’s statement that boredom is “a signal, not a sickness” (paragraph 3) suggests that

イ　boredom is a serious illness that must be treated.
ロ　using a screen is the best response to boredom.
ハ　boredom tells us that something is lacking and deserves our attention.
ニ　hunger and boredom have the same cause.

解答・解説　トレーニング3

1　正解 ハ　研究・人物の主張

根拠　“A surprising number chose to shock themselves rather than simply sit with their thoughts.”

言い換え　a mild electric shock → an unpleasant sensation ／ chose A rather than B → preferred A to B（構文の書き換え）

イ　寄せ集め　15分という数字と room の寄せ集め。
ロ　逆　rather than simply sit with their thoughts と逆。
ニ　寄せ集め　ボタンを押したのは本人（chose to shock themselves）。

2　正解 イ　研究・人物の主張

根拠　“participants who first completed a dull task … later produced more imaginative ideas … than those who had skipped the dull task.”

言い換え　first completed a dull task → doing a boring task beforehand ／ more imaginative ideas → more creative thinking

ロ　寄せ集め　作業内容から記憶術を連想させた捏造。
ハ　すり替え　比較の主語を入れ替えた。
ニ　逆　pushes the mind to search for stimulation と逆。

3　正解 ハ　研究・人物の主張

根拠　“like hunger, it tells us that something is missing, and the right response is … to ask what we actually want to do.”

言い換え　something is missing → something is lacking ／ ask what we want → deserves our attention

イ　逆　not a sickness と逆。
ロ　逆　not to silence it with a screen と逆。
ニ　寄せ集め　like hunger は比喩。原因が同じとは言っていない。

言い換えの見抜き方 —— 研究・人物の主張

— **研究は3点セットでメモする。**①対象（participants / students）②方法（何をさせたか）③結果（比較の向き）。第2問の誤答ロは③の主語を入れ替えた【すり替え】。

— **比較構文の向きを矢印で書く。**「退屈作業あり ＞ なし（創造性）」と書いておけば、向きを逆にした選択肢を即座に切れる。2025年の Blursday 研究（孤立と時間の遠さ）もこの型だった。

— **人物の発言は「直後の説明文」が答え。**a signal, not a sickness の意味は、コロン以下（something is missing）に書いてある。

— **否定の部分（not …）は誤答の材料になる。**not a sickness →「病気だ」、not to silence it with a screen →「スクリーンが最善」。本文の否定を外した選択肢は【逆】。

トレーニング4　比喩・例示の意図 —— 修理する文化

"... in order to suggest that" "uses the metaphor of ... to describe how" 型。**字義を捨て、比喩のどの性質を借りたか**を考える。

次の文を読み、下記の1〜3それぞれに続くものとして、本文の内容ともっともよく合致するものを、各イ〜ニから1つずつ選べ。（約163語）

[1] Not long ago, a broken toaster was something to be fixed. Many readers will remember a grandparent sitting by the window darning socks, patiently weaving new thread across a hole until the sock could be worn again. Today, the same sock would usually be thrown away, and so would the toaster.

[2] Volunteers at “repair cafés,” where people bring broken items to be mended free of charge, hope to change this. One organizer describes the objects people bring as “diaries that happen to be made of metal and plastic”: a scratched lamp or a radio with a cracked case records years of a family’s life, and repairing it preserves that record.

[3] Economists sometimes describe our consumer culture as a one-way river, carrying raw materials from mines to shops to landfills without ever flowing back. Repair, in this picture, is a small dam. It cannot stop the river, but it slows the current long enough for us to notice where the water is going.

(Original passage written for this book)

1 The author mentions a grandparent darning socks (paragraph 1) in order to

イ　show that older people are better at sewing than young people.
ロ　illustrate a time when people commonly mended things instead of replacing them.
ハ　argue that socks should be made of stronger thread.
ニ　suggest that the author’s grandparent was poor.

2 The organizer compares repaired objects to “diaries” (paragraph 2) to suggest that

イ　people should write about the items they repair.
ロ　metal and plastic are good materials for diaries.
ハ　broken objects have no value once they are damaged.
ニ　objects can hold memories of the lives of the people who used them.

3 The image of repair as “a small dam” (paragraph 3) is used to describe how repair

イ　completely stops the flow of goods into landfills.
ロ　cannot reverse consumer culture but can slow it and make people more aware of waste.
ハ　damages the economy by blocking trade.
ニ　has no effect at all on how much people consume.

解答・解説　トレーニング4

1　正解 ロ　比喩・例示の意図

根拠　段落の主題文 “Not long ago, a broken toaster was something to be fixed.” と、最後の “Today … would usually be thrown away” の対比。

言い換え　例示の意図は、その例を挟む主題文（ここでは段落冒頭）に書いてある。

イ　寄せ集め　世代間の技術比較は本文にない。
ハ　寄せ集め　thread の字面の寄せ集め。
ニ　寄せ集め　記述なし。

2　正解 ニ　比喩・例示の意図

根拠　コロン以下 “records years of a family’s life, and repairing it preserves that record.”

言い換え　diary の性質のうち「記録する」が使われている。records years of a family’s life → hold memories of the lives

イ　寄せ集め　diary の字面。
ロ　寄せ集め　made of metal and plastic の字面。
ハ　逆　修理で記録を守ると言う。逆。

3　正解 ロ　比喩・例示の意図

根拠　“It cannot stop the river, but it slows the current long enough for us to notice where the water is going.”

言い換え　cannot stop → cannot reverse ／ slows the current → slow it ／ notice where the water is going → more aware of waste

イ　極端語　“It cannot stop the river” と逆。completely は極端。
ハ　寄せ集め　dam（せき止める）からの連想。
ニ　逆　slows the current と逆。

言い換えの見抜き方 ── 比喩・例示の意図

- **比喩の3ステップ。**①字義の選択肢（diary に書く、dam が交易を止める）をまず消す ②比喩の「どの性質」が使われたかを特定する（diary＝記録、dam＝流れを緩める）③直後の説明文（コロン・but　以下）と照合する。
- **「全面肯定」と「全面否定」を両方消す。**dam の比喩は cannot stop … but slows という**部分的効果**。completely stops も no effect at all も誤り。正解はたいてい「〜ではないが〜する」という中間の形。
- **例示は「何の例か」を段落の主題文で決める。**祖父母の靴下の例は「昔は直すのが当たり前だった」の例。2025年の　Montagu（母親のハミング）、Odell（シエスタ）も同じ型で、例を挟む抽象文が答えだった。

トレーニング5　EXCEPT 問題 —— 茶の歴史

"all of the following statements are true ... EXCEPT that" 型。**4肢すべてを本文と照合し、○○○×の×を選ぶ**。正解（×）はたいてい本文と逆か、役割のすり替え。

次の文を読み、下記の1〜3それぞれに続くものとして、本文の内容ともっともよく合致するものを、各イ〜ニから1つずつ選べ。（約162語）

[1] Tea was drunk in China for many centuries before it reached Europe. It was valued at first as a medicine, and only later became an everyday drink. Over time, distinct ways of preparing it developed: leaves were pressed into bricks, ground into powder, or steeped loose in hot water.

[2] Tea arrived in Europe in the early seventeenth century, carried by Dutch traders. In Britain it was at first an expensive luxury, kept in locked boxes, and heavy taxes encouraged widespread smuggling. When the tax was sharply reduced in the late eighteenth century, tea became affordable for working families and soon became a national habit.

[3] The trade had darker consequences as well. To pay for tea, British merchants exported opium to China, contributing to two wars in the nineteenth century. Later, tea plantations were established in India and Ceylon, where laborers often worked under harsh conditions for very low wages. Behind every cup, in other words, lay a long chain of human labor.

(Original passage written for this book)

1　Based on paragraph 1, all of the following statements are true EXCEPT that

イ　tea was first used in China as an everyday drink rather than as a medicine.
ロ　tea was drunk in China long before it was known in Europe.
ハ　several methods of preparing tea developed over time.
ニ　some tea was made from leaves pressed into bricks.

2　Based on paragraph 2, all of the following statements about tea in Britain are true EXCEPT that

イ　high taxes made smuggling rare.
ロ　it was once costly enough to be kept locked away.
ハ　it was brought to Europe by Dutch traders.
ニ　lower taxes helped to make it popular among ordinary people.

3　Paragraph 3 mentions all of the following EXCEPT

イ　that opium was used to pay for tea.
ロ　that the tea trade contributed to armed conflicts.
ハ　that tea was grown on plantations in Ceylon.
ニ　that plantation workers in India were generously paid.

解答・解説　トレーニング5

1　正解 イ　EXCEPT 問題

根拠　本文は “valued at first as a medicine, and only later became an everyday drink”。順序を逆にした【本文と逆】。

言い換え　at first A, only later B（最初はA、後になってB）の順序の反転は EXCEPT の定番。

ロ　**本文一致**　“for many centuries before it reached Europe”（本文一致）。
ハ　**本文一致**　“distinct ways of preparing it developed”（本文一致）。
ニ　**本文一致**　“leaves were pressed into bricks”（本文一致）。

2　正解 イ　EXCEPT 問題

根拠　本文は “heavy taxes encouraged widespread smuggling”。因果の向きを逆にした【本文と逆】。

言い換え　encourage（促す）↔ make rare（まれにする）。動詞1語の反転で×が作られる。

ロ　**本文一致**　“an expensive luxury, kept in locked boxes”（本文一致）。
ハ　**本文一致**　“carried by Dutch traders”（本文一致）。
ニ　**本文一致**　“tax was sharply reduced … affordable for working families”（本文一致）。

3　正解 ニ　EXCEPT 問題

根拠　本文は “for very low wages”。正解は【本文と逆】。

言い換え　wars → armed conflicts、exported opium to pay for tea → opium was used to pay for tea。本文一致肢は上位語・態の変換で作られる。

イ　**本文一致**　“To pay for tea, British merchants exported opium”（本文一致）。
ロ　**本文一致**　“contributing to two wars”（本文一致）。
ハ　**本文一致**　“plantations were established in India and Ceylon”（本文一致）。

言い換えの見抜き方 —— EXCEPT 問題

- **4肢に ○×？ を書き込む。** EXCEPT は「1つ見つけたら終わり」ではなく、○を3つ確認して×を確定させる問題。迷ったら？をつけて先に○を固める。
- **×になりやすい箇所**：①順序（at first … only later）②因果の向き（encourage ↔ prevent）③比較の向き（more ↔ less）④否定（no / not）⑤定義の主語（domestication ↔ foreignization）。
- **本文一致肢は「平易化・上位語化」されている。** wars → armed conflicts、kept in locked boxes → costly enough to be kept locked away。言い換えに気づかず○を×と誤認するのが最大の失点原因。
- **過去問の実例。** 2023年 “wheelchair curling requires players to sweep”（本文は prohibited）、2024年 “new animal species always improve”（極端語）、2026年 hard sciences と humanities の役割の入れ替え。

トレーニング6　タイトル・結論 —— 再読の楽しみ

"The most appropriate title for this passage is" "Based on the final paragraph ..." 型。**第1段落の問い＋最終段落の答え**をカバーし、範囲が広すぎも狭すぎもしないものを選ぶ。

次の文を読み、下記の1〜3それぞれに続くものとして、本文の内容ともっともよく合致するものを、各イ〜ニから1つずつ選べ。（約200語）

[1] Most readers, faced with a pile of unread books, feel that rereading is a kind of luxury, even a waste. Why return to a novel whose ending we already know when there are so many we have never opened?

[2] Yet rereading offers pleasures that a first reading cannot. Freed from the need to find out what happens, we notice how the story is built: the small hint in an early chapter, the phrase that returns, transformed, near the end. Psychologists have even found that people often enjoy stories more, not less, when they know the outcome in advance, perhaps because they can attend to how events unfold rather than to what they are.

[3] Rereading also reveals how we ourselves have changed. A novel read at fifteen and again at forty is, in a sense, two different books, because the reader brings different experiences to it. The book stays the same; the reader does not.

[4] Perhaps, then, the question is not whether we can afford to reread, but whether we can afford not to. The books we return to are not those we failed to understand the first time; they are those that keep finding new things to say to us.

(Original passage written for this book)

1　Based on paragraph 3, the author suggests that

イ　teenagers understand novels better than adults do.
ロ　the text of a novel changes each time it is reread.
ハ　rereading shows readers how their own perspectives have changed over time.
ニ　readers should read each novel only once.

2　Based on the final paragraph, the author would most likely agree that

イ　the books worth returning to are those that continue to offer new meanings.
ロ　we should reread only the books we did not understand.
ハ　rereading is a luxury that few people can afford.
ニ　we should finish every unread book before rereading any.

3 The most appropriate title for this passage is

イ “How to Finish a Pile of Unread Books.”

ロ “Why Knowing the Ending Ruins a Story.”

ハ “Old Books, New Readers: The Rewards of Rereading.”

ニ “The Reading Habits of Fifteen-Year-Olds.”

解答・解説　トレーニング6

1 正解 ハ　タイトル・結論

根拠 “Rereading also reveals how we ourselves have changed.”

言い換え how we ourselves have changed → how their own perspectives have changed

イ　寄せ集め　fifteen と forty の寄せ集めで優劣を捏造。

ロ　逆　“The book stays the same; the reader does not.” と逆。two different books は比喩。

ニ　逆　段落の趣旨（再読の価値）と逆。

2 正解 イ　タイトル・結論

根拠 “they are those that keep finding new things to say to us.”

言い換え keep finding new things to say → continue to offer new meanings

ロ　逆　“not those we failed to understand” と逆。

ハ　すり替え　第1段落の通説。筆者の結論とすり替え。

ニ　寄せ集め　unread books の寄せ集め。

3 正解 ハ　タイトル・結論

根拠 第1段落の問い（再読は無駄か）→ 第2・3段落の2つの利点 → 第4段落の結論（再読しないわけにはいかない）。

言い換え Old Books（本は同じ）, New Readers（読者は変わる）は第3段落、Rewards は第2段落と全体の結論に対応。

イ　寄せ集め　第1段落の語の流用。主題と逆向き。

ロ　逆　第2段落の研究結果と逆。

ニ　焦点ずれ　第3段落の一部。範囲が狭い。

言い換えの見抜き方 —— タイトル・結論

- **タイトルは「範囲」と「論調」の2軸で判定する。**範囲：1段落だけの話（狭すぎ）や本文にない一般論（広すぎ）は×。論調：筆者が否定した通説を掲げるものは×。
- **第1段落の問いと最終段落の答えを1行で書いてから選ぶ。**「再読は無駄か？ → 新しいことを語り続ける本こそ再読に値する」。この1行に合うタイトルは1つしかない。
- **結論問題は Perhaps, then / In short / Ultimately の後ろ。**not A but B の B が筆者の主張。2026年は大問Iの最後が結論段落（ニーチェを読んだ体験）の内容を問う形だった。
- **過去問の実例。**2023年 How Curling Became an International Sport、2024年 The False Promise of ChatGPT、2025年 What Is the Purpose of Music?。どれも「本文全体の問い」をそのまま題にした素直な形。

PART 2 — ORIGINAL PRACTICE PASSAGES

オリジナル実戦長文 8題

本番と同じ形式 ／ 各約1,000語・10問 ／ 1題20分

ここからは本番形式の演習である。英文はすべて本書のためのオリジナルで、テーマは PART 0 の予想（文化・人文系と、心理・科学系）に沿って選び、過去8題とは重ならないようにした。設問は本番どおり**段落番号つき・本文の順の10問**で、各題に下線語の意味1問・EXCEPT 1〜2問・研究や人物の主張・タイトル（または結論）を必ず含めてある。

1. **ストップウォッチを20分にセットする。**設問文の先読みから始める（PART 0-6 の手順）。
2. **解き終えたら、改ページ後の解答解説で採点する。**正解の数よりも、間違えた設問の「誤答の型」に注目する。
3. **段落要旨表で読みの精度を確認する。**各段落を1行で言えなかった段落は、もう一度読む。
4. **重要語句表の語を覚える。**どれも立教文学部の本文に出てもおかしくない語である。

演習	テーマ	ジャンル	語数	段落	設問
演習1	翻訳と言語の多様性	論説（文化論・言語）	1,135	11	10
演習2	美術館の役割	論説（文化史・社会）	1,019	11	10
演習3	記憶と物語	科学記事（心理学・研究紹介型）	974	11	10

解説の記号

誤答の選択肢には次の型を示した。**寄せ集め** 本文の語を集めて関係を捏造 **極端語** always / only / completely など **付け替え** 別の研究・数字・時代・対象と結びつける **逆** 本文と反対 **焦点ずれ** 部分的に正しいが問いに答えていない **すり替え** 2つの概念・主体の役割を入れ替える **別義・連想** 下線語の別の意味や字面からの連想。EXCEPT 問題の本文に合う3肢には **本文一致** と示した。

PRACTICE 1 — TARGET TIME 20 MIN.

演習1　翻訳と言語の多様性

論説（文化論・言語）　約1,135語　11段落　設問10問　目標20分

次の文を読み、下記の1〜10それぞれに続くものとして、本文の内容ともっともよく合致するものを、各イ〜ニから1つずつ選べ。

[1] “Translator, traitor.” The pun works neatly in Italian, where *traduttore* and *traditore* differ by only a letter or two, and it has been repeated for centuries by people who believe that something essential always disappears when a text moves from one language to another. The complaint is not foolish. Anyone who has compared a favorite poem with its translation knows the small shock of finding the music gone and the jokes flattened. Yet the saying hides an awkward fact: without translation, most of the world’s literature would be closed to most of the world’s readers. Very few people read Homer in ancient Greek, Tolstoy in Russian or Murasaki Shikibu* in classical Japanese. For nearly everyone, the great books of other cultures exist only because someone was willing to commit the “betrayal.”

[2] The scale of the problem becomes clear when we consider how many languages there are. Linguists estimate that roughly seven thousand languages are spoken today, and a large proportion of them are endangered, used mainly by elderly speakers and seldom passed on to children. At the same time, the traffic of translation between these languages is remarkably uneven. A large share of the books translated around the world are translated from English, while comparatively few are translated into it. A figure often cited in publishing suggests that only about three percent of the books published in the United States each year are translations.

[3] This imbalance has consequences that go beyond the book trade. Readers who rely on English see only a thin slice of what is being written elsewhere, and the stories that reach them tend to be those that already resemble their own. Over time, the experiences of one linguistic community can come to seem “universal” simply because they circulate everywhere, while equally rich traditions remain local. A reader in London may know a great deal about life in New York and almost nothing about life in Lagos** or Jakarta, not because those places have produced less literature, but because so little of it has been carried across.

[4] What, then, does a translator actually do? The popular image is of someone who replaces each word with its equivalent, as if languages were sets of interchangeable parts. In practice, the work involves constant judgment. Consider the Japanese word *komorebi*, which refers to sunlight filtering through the leaves of trees. English has no single word for it, so a translator must decide how to render it: with a phrase, with a footnote, or by borrowing the original word and trusting the context to explain it. The word is small, but it carries a way of noticing the world that English speakers have not bothered to name.

[5] Scholars of translation often describe two broad strategies. The first, sometimes called “domestication,” makes the text read as if it had been written in the reader’s own language: unfamiliar customs are explained or replaced, and the prose is made smooth and natural. The second, “foreignization,” deliberately keeps some of the strangeness of the original, leaving foreign words untranslated and preserving unusual sentence patterns. The distinction goes back at least to the early nineteenth century, when the German thinker Friedrich Schleiermacher*** argued that a translator can either move the writer toward the reader or move the reader toward the writer. Neither approach is simply correct. A domesticated translation may be more enjoyable, but it risks erasing the very differences that made the work worth translating; a foreignized one may be more faithful, but it can also feel stiff.

[6] Working translators tend to describe their task less as a choice between these poles than as an ongoing negotiation. Mariana Ortiz, who has translated more than a dozen Brazilian novels into English, compares herself to “a guest who has been asked to rearrange the furniture in someone else’s house.” She must move things, she explains, because an English sentence cannot stand where a Portuguese one stood; but she must also remember that the house is not hers, and that its owner would want visitors to recognize it. The comparison captures both the freedom and the responsibility of the work.

[7] In recent years, machine translation has changed the landscape dramatically. Online systems can now produce usable versions of emails, menus and news articles in seconds, and for many everyday purposes they are a genuine help. But these systems learn from enormous collections of existing texts, and such collections are available mainly for widely used languages. For languages with only a small written record, the results are often poor. The technology that promises to connect everyone may therefore end up strengthening the position of languages that are already dominant, while those spoken by smaller communities fall further behind.

[8] There is also evidence that the way a text is translated affects what readers take from it. In one study, researchers gave two groups of university students different English versions of the same short story set in rural Indonesia. One version replaced local foods, festivals and forms of address with familiar equivalents; the other kept the original terms and explained them briefly. Afterwards, the students who read the second version remembered considerably more about the setting and described the characters as less similar to themselves, but also as more interesting. The researchers concluded that a little friction in reading may help readers notice cultural difference rather than overlook it.

[9] Translation matters, too, for the survival of languages themselves. When children’s books, songs and even video games are translated into an endangered language, young people gain reasons to use that language outside the home. Several communities have found that such projects raise the status of their language in the eyes of the young, who had previously regarded it as old-fashioned. In this sense, translation does not only carry works out of small languages into large ones; it can also bring the wider world into a small language and help keep it alive.

[10] Reading in translation can also teach a kind of humility. Every language divides experience in its own way, marking some distinctions carefully and ignoring others. When we read a translated novel attentively, we are reminded that our own language is only one possible way of organizing the world, not a transparent window onto it. That realization makes our language seem less natural, and therefore more interesting.

[11] None of this means that the old complaint is wrong. Something is always lost when a text crosses from one language to another, and translators are the first to admit it. But to call translation a betrayal is to ignore what is gained: a reader who would otherwise have been shut out, a culture that would otherwise have gone unheard, a language that finds new reasons to be spoken. Translation is better understood as a form of hospitality, an invitation extended across a border that would otherwise remain closed.

(Original passage written for this book)

---

*Murasaki Shikibu 紫式部
**Lagos ラゴス（ナイジェリアの都市）
***Friedrich Schleiermacher フリードリヒ・シュライアマハー（ドイツの神学者・哲学者）

設問

1 The saying “Translator, traitor” is introduced in paragraph 1 in order to

イ show that Italian is especially difficult to translate into other languages.
ロ present a familiar view of translation that the author goes on to question.
ハ argue that only readers of the original language can understand great literature.
ニ explain why the author prefers poems to novels in translation.

2 According to paragraph 2, the translation of books between languages

イ is unbalanced, with far more works translated out of English than into it.
ロ has increased rapidly because many languages are endangered.
ハ accounts for about three percent of all books published in the world.
ニ is mainly carried out by elderly speakers of minority languages.

3 The underlined word “render” (paragraph 4) is closest in meaning to

イ give back.
ロ express.
ハ cause to become.
ニ provide.

4 The author mentions the word *komorebi* (paragraph 4) in order to show that

イ Japanese has more words for nature than any other language.
ロ translators should always use footnotes for unfamiliar words.
ハ English speakers are unable to notice sunlight in the trees.
ニ some words reflect ways of perceiving that cannot be replaced by a single word in another language.

5 Based on paragraph 5, all of the following statements about “domestication” and “foreignization” are true EXCEPT that

イ domestication may replace unfamiliar customs with familiar ones.

ロ foreignization makes a translation read as if it had been written in the reader’s own language.

ハ foreignization may leave some words from the original untranslated.

ニ each approach has both advantages and disadvantages.

6 Mariana Ortiz compares herself to “a guest who has been asked to rearrange the furniture in someone else’s house” (paragraph 6) to describe how a translator

イ must make changes to a work while respecting that it belongs to someone else.

ロ should leave the original text exactly as it is.

ハ feels uncomfortable when visiting foreign countries.

ニ is free to redesign the work according to personal taste.

7 As discussed in paragraph 7, one problem with machine translation is that

イ it cannot yet translate everyday texts such as emails and menus.

ロ it will soon replace human translators of novels completely.

ハ it tends to work less well for languages with little written material, which may widen existing gaps.

ニ it learns mainly from languages spoken by small communities.

8 According to the study described in paragraph 8, students who read the version that kept the original terms

イ found the story harder to finish and enjoyed it less.

ロ thought the characters were more similar to themselves.

ハ were mostly from rural Indonesia.

ニ recalled more about the story’s setting and found the characters more interesting.

9 Based on paragraphs 9 and 10, all of the following statements are true EXCEPT that

イ translating popular works into a small language can give young people reasons to use it.

ロ translation can bring outside works into small languages, not only take works out of them.

ハ translation into endangered languages tends to make young people regard those languages as old-fashioned.

ニ reading translations carefully can remind readers that their language is one way of organizing experience.

10 The most appropriate title for this passage is

イ “Translation as Hospitality: What We Gain by Crossing Languages.”

ロ “Why Machines Will Soon Replace Human Translators.”

ハ “The Endless Betrayal: Why Great Literature Cannot Be Translated.”

ニ “Domestication and Foreignization in Nineteenth-Century Germany.”

演習1 解答・解説 —— 翻訳と言語の多様性

正解	ロ	イ	ロ	ニ	ロ	イ	ハ	ニ	ハ	イ
型	比喩 例示の意図	段落内容	下線語句の意味	比喩 例示の意図	EXCEPT	研究 人物の主張	段落内容	研究 人物の主張	EXCEPT	タイトル 結論

段落要旨

段落	要旨
1	「翻訳者は裏切り者」という通説。だが翻訳がなければ世界文学の大半は読めない。
2	約7,000言語の多くが危機言語。翻訳の流れは英語からの一方通行（米国の翻訳書は約3%）。
3	不均衡の帰結：英語圏の読者は世界の一部しか見ず、一部の経験だけが「普遍的」に見える。
4	翻訳は語の置き換えではなく判断の連続。komorebi をどう訳すか。
5	「受容化」と「異化」の2戦略（シュライアマハー）。どちらも一長一短。
6	翻訳者オルティスの比喩：他人の家の家具を動かす客。自由と責任の両面。
7	機械翻訳は便利だが、文字資料の少ない言語では弱く、言語間の格差を広げうる。
8	研究：原語を残した版の読者は舞台をよく覚え、登場人物を面白いと感じた。
9	危機言語への翻訳は若者に言語を使う理由を与え、言語の存続を助ける。
10	翻訳を読むと、自分の言語も世界の切り分け方の一つにすぎないと気づく（謙虚さ）。
11	結論：失うものはあるが得るものが大きい。翻訳は「もてなし」である。

各設問の根拠と誤答の型

1 正解 ロ　比喩・例示の意図

根拠 通説 “Translator, traitor” を紹介し、“The complaint is not foolish.” と一度認めたうえで “Yet the saying hides an awkward fact” と反論に転じる。

言い換え 通説の紹介 → Yet で反論、という段落構造そのものを “a familiar view … that the author goes on to question” と抽象化している。

イ　寄せ集め　Italian は駄洒落が成立する言語として出てくるだけ。「イタリア語は訳しにくい」という主張はない。

ハ　極端語　only の極端化。筆者は逆に「翻訳がなければ大半の読者は読めない」と述べる。

ニ　寄せ集め　poem は「訳すと音楽が消える」例に出るだけ。小説との優劣は本文にない。

2 正解 イ　段落内容

根拠 “the traffic of translation between these languages is remarkably uneven. A large share … are translated from English, while comparatively few are translated into it.”

言い換え remarkably uneven → unbalanced ／ translated from English … few into it → far more … out of English than into it

ロ　寄せ集め　endangered と「翻訳の増加」を因果で結んだ捏造。両者は同じ段落にあるだけ。

ニ　寄せ集め　elderly speakers は危機言語の話者の説明。翻訳の担い手の話ではない。

3 正解 ロ 下線語句の意味

根拠 “decide how to render it: with a phrase, with a footnote, or by borrowing the original word” — コロン以下に「訳し方＝表現のしかた」が3つ並ぶ。

言い換え 下線語を空欄にすると「それをどう（　）するか：句で、注で、借用で」。入るのは「表現する・訳す」。

イ 別義・連想 「返す」は render の古い別義。訳し方を3つ並べる文脈に合わない。

ハ 別義・連想 render O C（OをCにする）の用法。目的語 it の後に形容詞がないので不可。

ニ 別義・連想 render a service（提供する）の用法。

4 正解 ニ 比喩・例示の意図

根拠 “English has no single word for it” ／ “it carries a way of noticing the world that English speakers have not bothered to name.”

言い換え a way of noticing the world → ways of perceiving ／ no single word for it → cannot be replaced by a single word

イ 極端語 他言語との数の比較は本文にない。過度の一般化。

ロ 極端語 always の極端化。本文は句・注・借用の3案を並べ、どれも一長一短とする。

ハ 極端語 “have not bothered to name”（名付けてこなかった）を「気づけない」に強めた。

5 正解 ロ EXCEPT

根拠 “as if it had been written in the reader’s own language” は domestication の説明。正解肢はそれを foreignization に入れ替えた【役割のすり替え】。

言い換え 2つの概念を対比する段落では、定義の主語を入れ替えるのが EXCEPT 問題の定番。

イ 本文一致 “unfamiliar customs are explained or replaced” の言い換え（本文一致）。

ハ 本文一致 “leaving foreign words untranslated” の言い換え（本文一致）。

ニ 本文一致 最後の2文（may be more enjoyable, but … / may be more faithful, but …）の要約（本文一致）。

6 正解 イ 研究・人物の主張

根拠 “She must move things … but she must also remember that the house is not hers”

言い換え move things → make changes ／ the house is not hers → it belongs to someone else

ロ 逆 “She must move things” と逆。

ハ 寄せ集め guest / house の字義に引きずられた選択肢。比喩問題の典型的な罠。

ニ 焦点ずれ 「自由」の面だけを取り、“the house is not hers”（責任）を落とした。段落末の both the freedom and the responsibility に注目。

7 正解 ハ 段落内容

根拠 “For languages with only a small written record, the results are often poor … strengthening the position of languages that are already dominant, while those spoken by smaller communities fall further behind.”

言い換え a small written record → little written material ／ fall further behind → widen existing gaps

イ 逆 本文は emails, menus を「数秒で使える版が作れる」と評価している。

ロ 極端語 本文に記述なし。completely も危険信号。

ニ すり替え 主に学ぶのは widely used languages。大言語と小言語を入れ替えた。

8 正解 ニ　研究・人物の主張

根拠 “the students who read the second version remembered considerably more about the setting and described the characters as less similar to themselves, but also as more interesting.”

言い換え remembered considerably more about the setting → recalled more about the story’s setting

イ　寄せ集め　friction（読みの引っかかり）から連想させた捏造。楽しさには言及がない。
ロ　逆　less similar を more similar に反転。
ハ　寄せ集め　rural Indonesia は物語の舞台。被験者は university students。

9 正解 ハ　EXCEPT

根拠 本文は “raise the status of their language in the eyes of the young, who had previously regarded it as old-fashioned”。「以前は古くさいと見ていた」→ 翻訳で地位が上がった。正解肢は【本文と逆】。

言い換え had previously regarded（以前は〜とみなしていた）の previously を見落とすと、逆の選択肢を本文一致と誤認する。

イ　本文一致　“young people gain reasons to use that language outside the home”（本文一致）。
ロ　本文一致　“it can also bring the wider world into a small language”（本文一致）。
ニ　本文一致　第10段落 “our own language is only one possible way of organizing the world”（本文一致）。

10 正解 イ　タイトル・結論

根拠 第1段落の通説（翻訳＝裏切り）に対し、最終段落 “Translation is better understood as a form of hospitality” で答える。全体は「翻訳で何が得られるか」。

言い換え 最終段落のキーワード hospitality と、第11段落 what is gained がそのままタイトルに入っている。

ロ　焦点ずれ　機械翻訳は第7段落だけ。しかも筆者は限界を指摘している。
ハ　逆　betrayal 説は筆者が退けた通説。論調が逆。
ニ　焦点ずれ　第5段落の一部だけ。範囲が狭すぎる。

重要語句

語句	品詞	意味	語句	品詞	意味
betrayal	名	裏切り	faithful	形	忠実な
endangered	形	絶滅の危機にある	negotiation	名	交渉・折り合いをつけること
uneven	形	不均衡な	dominant	形	支配的な・優勢な
circulate	動	流通する・広まる	friction	名	摩擦・引っかかり
render	動	表現する・訳す／OをCにする	overlook	動	見落とす
equivalent	名	相当するもの	humility	名	謙虚さ
interchangeable	形	交換可能な	hospitality	名	もてなし
deliberately	副	意図的に			

PRACTICE 2 — TARGET TIME 20 MIN.

演習2　美術館の役割

論説（文化史・社会）　約1,019語　11段落　設問10問　目標20分

次の文を読み、下記の1〜10それぞれに続くものとして、本文の内容ともっともよく合致するものを、各イ〜ニから1つずつ選べ。

[1] On any summer afternoon in a famous art museum, a familiar scene repeats itself. A crowd gathers in front of the most celebrated painting in the building, phones are raised above heads, and within a minute or two most of the crowd has moved on to the next famous painting. Many of these visitors will leave with excellent photographs of works they have barely looked at. The scene is easy to mock, but it raises a serious question that museums themselves have been asking for several decades: what, exactly, is a museum for?

[2] The question would have puzzled the people who created the first collections. In Renaissance Europe, princes, merchants and scholars assembled “cabinets of curiosities,”* rooms crowded with shells, fossils, coins, paintings and objects brought from distant lands. These collections were private. They displayed the wealth and learning of their owners and were shown only to invited guests. A decisive change came in 1793, when, in the middle of the French Revolution, the Louvre in Paris was opened to the public. The royal collection was now presented as the property of the nation, and the idea that great works of art should be available to ordinary citizens began to spread across Europe.

[3] During the nineteenth century, public museums multiplied, and governments came to see them as tools of education and national pride. Grand buildings were designed to resemble temples, and visitors were expected to walk through them quietly, improving their taste and their character. Yet many of these institutions were also products of empire. Their galleries were filled with objects acquired, sometimes by purchase but often by force, from places that European powers had conquered. The museum that claimed to educate the public was, in part, a display of power over other peoples.

[4] That history has not stayed in the past. In recent decades, governments and communities in Africa, Asia, the Pacific and the Americas have asked for the return of objects that were taken from them, and the ownership of many famous pieces remains contested. Some museums have returned items, sometimes after long negotiation. Others argue that “universal museums,” which display the cultures of the world side by side, allow millions of visitors to compare civilizations they would otherwise never encounter. The debate is far from settled, but it has forced museums to ask whose stories they are telling, and for whom.

[5] At the same time, many museum professionals have rethought the purpose of their institutions in a more general way. An American museum thinker of the late twentieth century argued that museums must shift from “being about something to being for somebody.” In his view, a museum was no longer justified

simply by the importance of its collection; it had to show what difference it made to the lives of the people it served. Exhibitions began to be planned with visitors' questions in mind, and education departments, once small and marginal, moved closer to the center of museum life.

[6] One difference a museum might make is to change how people look. Here the evidence is not encouraging. Studies conducted at large art museums have repeatedly found that visitors spend, on average, less than thirty seconds in front of an individual work, and a good part of that time is spent reading the label. The spread of smartphones has added a new habit: photographing a painting instead of studying it, as though the picture could be looked at properly later. In practice, most such photographs are seldom opened again.

[7] In response, a number of museums have begun to promote what is sometimes called "slow looking." Visitors are invited to spend ten or fifteen minutes with a single object, often with a guide who asks simple questions: What do you notice first? What do you notice after five minutes? Dr. Naomi Fielding, a museum educator who has led such sessions for years, compares the experience to "watching a photograph develop in a darkroom."** At first, she says, the paper is blank, and nothing seems to be happening; then shapes appear, and finally details that no one could have seen at the beginning.

[8] Some research supports her claim. In one study, two groups of visitors spent the same amount of time in a gallery. The first group followed a quick tour of fifteen works; the second spent the whole time with just one painting. A week later, members of the second group could describe their painting in remarkable detail and reported that the visit had left them calmer. Members of the first group, despite having seen far more, had difficulty remembering more than a handful of the works, and several confused one painting with another.

[9] Museums are also being recognized as places that support well-being in a broader sense. In some countries, doctors can now recommend visits to museums and galleries, along with walking groups or choirs, as part of what is called "social prescribing"*** for patients suffering from loneliness or mild depression. Part of the value lies in the objects, but part lies in the space itself. A museum is one of the few public places where a person can spend an afternoon among strangers without being expected to buy anything.

[10] None of these developments is free of risk. Museums under financial pressure may be tempted to fill their halls with "immersive" exhibitions designed mainly to be photographed and shared online, or to rely on a few blockbuster shows that bring in crowds but leave little time for reflection. If a museum becomes simply another form of entertainment, it may attract more visitors while offering them less.

[11] Perhaps the answer to the question of what a museum is for lies in a combination of its old and new roles. A museum must still care for objects, study them and, where justice requires it, return them. But it is also a host, and what it offers its guests is something increasingly rare: time and attention. The crowd photographing the famous painting is not wrong to be there. The museum's task is to persuade at least some of its members to put down their phones and stay a little longer.

(Original passage written for this book)

*cabinet of curiosities 驚異の部屋（珍品陳列室）
**darkroom （写真の）暗室
***social prescribing 社会的処方

設問

1 The scene described in paragraph 1 is used mainly to

イ show that photography should be banned in art museums.
ロ prove that most visitors understand famous paintings well.
ハ introduce a question about the purpose of museums.
ニ explain why summer is the busiest season for museums.

2 According to paragraph 2, the opening of the Louvre to the public in 1793

イ was the first time a cabinet of curiosities was shown to invited guests.
ロ allowed the royal family to display its wealth to foreign visitors.
ハ reflected a new belief that great art should be accessible to ordinary people.
ニ ended the French Revolution and restored the power of the king.

3 In paragraph 3, the author points out that many nineteenth-century museums

イ discouraged visitors from improving their taste and character.
ロ were linked not only to public education but also to imperial power.
ハ bought all of their objects legally from other countries.
ニ were built mainly in Africa, Asia and the Pacific.

4 The underlined word “contested” (paragraph 4) is closest in meaning to

イ disputed.
ロ protected.
ハ admired.
ニ recorded.

5 The museum thinker mentioned in paragraph 5 argues that museums should

イ be justified mainly by the importance of their collections.
ロ be judged by the difference they make to the people they serve.
ハ reduce the size of their education departments.
ニ stop collecting objects altogether.

6 According to the studies mentioned in paragraph 6, visitors to large art museums

イ typically spend only a brief time looking at each individual work.
ロ spend about thirty minutes in front of each painting.
ハ usually study their photographs of paintings carefully at home.
ニ rarely read the labels next to the works.

7 Naomi Fielding compares slow looking to “watching a photograph develop in a darkroom” (paragraph 7) to describe how

イ visitors should take photographs before looking at a work.

ロ museums ought to keep their galleries dark.

ハ first impressions of a work are usually the most accurate.

ニ details and meaning in a work emerge gradually through sustained attention.

8 Based on paragraph 8, all of the following statements about the study are true EXCEPT that

イ both groups spent the same amount of time in the gallery.

ロ those who stayed with one painting could describe it in detail a week later.

ハ the visitors who followed the quick tour remembered most of the works they had seen.

ニ some members of the first group mixed up different paintings.

9 As discussed in paragraph 9, one reason museums may help people who feel lonely is that

イ doctors can treat serious depression only by sending patients to galleries.

ロ they provide public spaces where people can spend time among others without having to spend money.

ハ they offer choirs and walking groups inside their buildings.

ニ visitors are expected to talk with strangers about the objects.

10 The most appropriate title for this passage is

イ “How Smartphones Have Destroyed the Art Museum.”

ロ “The Cabinet of Curiosities in Renaissance Europe.”

ハ “Why Museums Should Return Every Object in Their Collections.”

ニ “From Treasure House to Host: Rethinking What Museums Are For.”

演習2 解答・解説 —— 美術館の役割

設問	1	2	3	4	5	6	7	8	9	10
正解	ハ	ハ	ロ	イ	ロ	イ	ニ	ハ	ロ	ニ
型	比喩 例示の意図	段落内容	段落内容	下線語句の意味	研究 人物の主張	研究 人物の主張	比喩 例示の意図	EXCEPT	段落内容	タイトル 結論

段落要旨

段落	要旨
1	名画の前でスマホを掲げ、ほとんど見ずに去る群衆。美術館は何のためにあるのか。
2	起源はルネサンス期の私的な「驚異の部屋」。1793年のルーヴル公開で「芸術は市民のもの」へ。
3	19世紀、教育と国家の誇りの道具に。同時に帝国支配の産物でもあった。
4	返還要求と「普遍的美術館」論。誰の物語を誰のために語るのかが問われる。
5	「何かについての場」から「誰かのための場」へ。来館者への貢献が基準になる。
6	1作品の平均鑑賞時間は30秒未満。写真を撮って「見たこと」にする習慣。
7	「スロー・ルッキング」。フィールディングの比喩：暗室で写真が現像されるのを見る。
8	研究：1枚を見続けた群は細部を覚え落ち着いた。速いツアー群はほとんど覚えていない。
9	「社会的処方」としての美術館。何も買わずに他人の中で過ごせる数少ない公共空間。
10	リスク：撮影映えの展示や大型企画展への依存。娯楽化すれば提供するものが減る。
11	結論：物を守る役割と、時間と注意を差し出す「もてなす側」の役割の両立。

各設問の根拠と誤答の型

1　正解 ハ　比喩・例示の意図

根拠　段落末 “it raises a serious question …: what, exactly, is a museum for?”

言い換え　raises a serious question → introduce a question ／ what is a museum for → the purpose of museums

イ　寄せ集め　撮影禁止の主張は本文にない。最終段落でも “is not wrong to be there” と述べる。

ロ　逆　“works they have barely looked at”（ほとんど見ていない）と逆。

ニ　焦点ずれ　summer afternoon は場面設定にすぎない。焦点がずれている。

2　正解 ハ　段落内容

根拠　“the idea that great works of art should be available to ordinary citizens began to spread”

言い換え　available to ordinary citizens → accessible to ordinary people ／ the idea … began to spread → reflected a new belief

イ　寄せ集め　招待客にだけ見せたのはルネサンス期の私的コレクション。語の寄せ集め。

ロ　すり替え　富の誇示は私的コレクションの役割。公開後の意味とすり替えている。

ニ　寄せ集め　革命の「最中」の出来事。革命を終わらせたという因果は捏造。

3 正解 ロ 段落内容

根拠 “tools of education and national pride … Yet many of these institutions were also products of empire … a display of power over other peoples.”

言い換え products of empire / display of power → imperial power。Yet … also の二面性を not only A but also B で表した。

イ 逆 “improving their taste and their character” が期待されていた。逆。

ハ 極端語 “sometimes by purchase but often by force”。all … legally は極端化。

4 正解 イ 下線語句の意味

根拠 直後に「返還した館もあれば（Some …）、反対論もある（Others argue …）」と対立が続き、“The debate is far from settled” とまとめる。

言い換え contest は「争う」。所有権が「争われている」状態を後続の文が具体化している。

ロ 別義・連想 museum からの連想。

ハ 別義・連想 famous pieces からの連想。

ニ 別義・連想 文脈と無関係。

5 正解 ロ 研究・人物の主張

根拠 “it had to show what difference it made to the lives of the people it served.”

言い換え what difference it made to the lives of the people it served → the difference they make to the people they serve

イ 逆 “no longer justified simply by the importance of its collection” と逆。

ハ 逆 教育部門は中心に近づいた（moved closer to the center）。

ニ 極端語 収集をやめろとは言っていない。極端化。

6 正解 イ 研究・人物の主張

根拠 “visitors spend, on average, less than thirty seconds in front of an individual work”

言い換え on average, less than thirty seconds → typically … only a brief time（数字を形容詞で抽象化）

ハ 逆 “most such photographs are seldom opened again” と逆。

ニ 逆 “a good part of that time is spent reading the label” と逆。

7 正解 ニ 比喩・例示の意図

根拠 “At first … the paper is blank … then shapes appear, and finally details that no one could have seen at the beginning.”

言い換え then … finally → gradually ／ ten or fifteen minutes with a single object → sustained attention

イ 寄せ集め photograph の字面。

ロ 寄せ集め darkroom の字面。

ハ 逆 最初は何も見えず、時間をかけて細部が現れる。逆。

8 正解 ハ EXCEPT

根拠 本文は “had difficulty remembering more than a handful of the works”。正解肢は【本文と逆】。

言い換え confuse A with B → mix up ／ a handful → only a few。EXCEPT の他の3肢はこうした平易な言い換え。

イ 本文一致 “spent the same amount of time in a gallery”（本文一致）。

ロ 本文一致 “A week later … in remarkable detail”（本文一致）。

ニ 本文一致 “several confused one painting with another”（本文一致）。

9 **正解 ロ** 段落内容

根拠 “A museum is one of the few public places where a person can spend an afternoon among strangers without being expected to buy anything.”

言い換え among strangers → among others ／ without being expected to buy anything → without having to spend money

イ 極端語 only / serious が誤り。本文は mild depression で、美術館は選択肢の一つ。

ハ 寄せ集め 合唱やウォーキングは「美術館と並ぶ」社会的処方の例。館内で行うとは書いていない。

ニ 寄せ集め 見知らぬ人と話すことが期待されるとは書かれていない。

10 **正解 ニ** タイトル・結論

根拠 第1段落の問い “what is a museum for?” に、最終段落 “it is also a host, and what it offers ... is ... time and attention” で答える構成。

言い換え 私的な宝物庫（第2段落）→ もてなす場（第11段落）という変化をタイトルが一言でまとめている。

イ 極端語 スマホは第1・6段落の一部。destroyed は極端。

ロ 焦点ずれ 第2段落の一部。範囲が狭い。

ハ 極端語 返還は “where justice requires it”。Every は極端。

重要語句

語句	品詞	意味	語句	品詞	意味

PRACTICE 3 — TARGET TIME 20 MIN.

演習3　記憶と物語

科学記事（心理学・研究紹介型）　約974語　11段落　設問10問　目標20分

次の文を読み、下記の1〜10それぞれに続くものとして、本文の内容ともっともよく合致するものを、各イ〜ニから1つずつ選べ。

[1] Most of us carry around a simple picture of memory. We imagine that experiences are recorded somewhere in the brain, like files on a computer or scenes on a video, and that remembering is a matter of finding the right file and pressing “play.” When we forget something, we assume the file has been lost; when we remember clearly, we assume we are seeing the past as it was. This picture is comforting, and it is also, according to nearly a century of research, largely mistaken.

[2] One of the first scientists to challenge it was the British psychologist Frederic Bartlett*. In the 1930s he asked university students in England to read an unfamiliar folk tale from a Native American culture and then to retell it, again and again, over weeks and months. With each retelling, the story changed. Details that seemed strange to the students dropped out or were replaced by more familiar ones; a canoe might become a boat, and puzzling supernatural events were explained away. The students were not lying. They were, Bartlett concluded, rebuilding the story each time from fragments, guided by their own expectations of what a story ought to contain.

[3] Later studies showed that even memories of dramatic public events behave in the same way. On the morning after a space shuttle exploded shortly after launch in 1986, an American psychologist asked his students to write down exactly how they had heard the news. Two and a half years later, he asked the same students to describe the moment again. Many of the new accounts differed sharply from the originals: people who had first heard the news from a friend now remembered seeing it on television. Yet most were highly confident that their memories were accurate, and some, when shown their own handwriting from the earlier occasion, insisted that the later version must be the true one.

[4] Why should memory be so unreliable? One answer is that it did not evolve to serve as an archive. An animal that remembers exactly where it found food last week is less well equipped than one that can combine bits of past experience to predict where food might be found tomorrow. Brain-imaging research has found that remembering the past and imagining the future draw on many of the same regions of the brain. Memory, on this view, is less a record than a toolkit: its parts are meant to be taken apart and reassembled.

[5] A consequence is that memories are malleable. Each time we call an experience to mind, we may alter it slightly, adding a detail suggested by a later conversation or dropping one that no longer fits. These changes are usually harmless, but they can matter a great deal. Courts have learned, often painfully, that a

confident eyewitness is not necessarily an accurate one, and that the way a question is asked can shape the answer a witness gives.

[6] If memory rebuilds the past, what guides the rebuilding? Increasingly, psychologists point to the stories we tell about ourselves. Researchers who study what they call “narrative identity” ask people to describe the high points, low points and turning points of their lives. They have found that people organize these memories into stories with recognizable shapes. Those who describe painful experiences as leading eventually to something good, such as a lesson learned or a relationship strengthened, tend to report greater well-being than those whose stories move in the opposite direction, from good beginnings to bad endings.

[7] Our life stories also help explain an odd feature of memory that appears in older adults. When people in their sixties or seventies are asked to recall memories at random, they produce a surprisingly large number from roughly the ages of ten to thirty. Psychologists call this the “reminiscence bump.”** One explanation is that these are the years in which identity is formed: first loves, first jobs and first independent decisions become the chapters around which the rest of the story is organized.

[8] Stories are not told only to ourselves. When we describe an experience to a friend, we shape it for that particular listener, stressing the funny parts for one and the frightening parts for another. Experiments suggest that we later tend to remember the version we told rather than the event itself. The novelist and former memory researcher Clara Wendt puts it this way: memory is “less like a library than like a theatre company that performs the same play every night, never in quite the same way.” The script survives, but each performance is new.

[9] Families provide a familiar illustration. Two siblings may sincerely disagree about which of them broke a window decades ago, or who was punished for it. Both have told the story many times, to different audiences, and each version has hardened with use. Neither is lying, and neither can prove the other wrong. Shared memories are not stored in a family archive; they are negotiated, sometimes over a lifetime.

[10] None of this means that memory is worthless. Most of what we remember is broadly accurate, and the ability to rebuild the past allows us to find meaning in it, connecting scattered events into a life that makes sense. The danger lies in forgetting that memory is a reconstruction. When we treat our recollections as recordings, we become overconfident in arguments, unjust in judgments and unwilling to listen to people who remember things differently.

[11] Perhaps, then, we should think of ourselves not as archivists of our past but as its authors. Authors cannot simply invent; they are bound by what actually happened. But they choose what to include, what to emphasize and how to connect one event to another. Recognizing that we are always telling stories about our lives does not make those stories false. It makes us responsible for telling them carefully, generously and with a degree of humility.

(Original passage written for this book)

---

*Frederic Bartlett フレデリック・バートレット（イギリスの心理学者）

**reminiscence bump レミニセンス・バンプ（回想の隆起）

設問

1 In paragraph 1, the author describes a common view that memory

イ preserves experiences as exact records that can later be replayed.
ロ is constantly rebuilt from fragments of past experience.
ハ is stored in a computer rather than in the brain.
ニ becomes clearer every time it is recalled.

2 According to paragraph 2, Frederic Bartlett's experiment showed that the students

イ deliberately lied in order to make the tale more interesting.
ロ remembered the strange details better than the familiar ones.
ハ were unable to retell the tale after the first few weeks.
ニ unknowingly changed the tale to fit their own expectations.

3 Based on paragraph 3, all of the following statements about the study of the space shuttle accident are true EXCEPT that

イ the students first wrote their accounts on the morning after the accident.
ロ the students' confidence in their memories fell as their accounts changed.
ハ some students later recalled a different source of the news.
ニ some students trusted their later memory more than their own earlier writing.

4 As discussed in paragraph 4, one reason memory works as it does is that

イ it may have developed to help us predict what will happen rather than to keep a perfect record.
ロ animals with exact memories survived better than others.
ハ the brain uses entirely separate regions for the past and the future.
ニ imagining the future is more difficult than remembering the past.

5 The underlined word "malleable" (paragraph 5) is closest in meaning to

イ reliable.
ロ valuable.
ハ changeable.
ニ visible.

6 According to researchers who study "narrative identity" (paragraph 6), people who

イ experience fewer painful events tend to tell more organized stories.
ロ begin their life stories with good experiences tend to be the happiest.
ハ avoid talking about turning points remember their lives more accurately.
ニ interpret painful events as leading to something positive tend to feel better about their lives.

7 The "reminiscence bump" (paragraph 7) is explained in the passage as a result of

イ the fact that older adults forget everything after the age of thirty.
ロ the tendency of people in their sixties to tell random stories.
ハ the importance of the years in which people form their sense of who they are.
ニ the greater number of events that happen to people over seventy.

8 Clara Wendt compares memory to “a theatre company” (paragraph 8) to suggest that

イ memories are stored as carefully as books in a library.

ロ people often remember plays better than real events.

ハ we should share our memories only with close friends.

ニ a memory is re-created each time it is recalled, with small variations.

9 Based on paragraphs 9 and 10, all of the following statements are true EXCEPT that

イ repeated retelling can make one version of a family story more fixed.

ロ most of what people remember is broadly accurate.

ハ siblings who disagree about the past are usually lying to protect themselves.

ニ treating memories as recordings can make people overconfident.

10 The most appropriate title for this passage is

イ “Why Eyewitnesses Should Never Be Trusted.”

ロ “Authors of Our Past: How Memory Rebuilds the Stories We Live By.”

ハ “The Brain as a Perfect Recording Machine.”

ニ “Memories of a Space Shuttle Accident.”

演習3 解答・解説 —— 記憶と物語

設問	1	2	3	4	5	6	7	8	9	10
正解	イ	ニ	ロ	イ	ハ	ニ	ハ	ニ	ハ	ロ
型	段落内容	研究 人物の主張	EXCEPT	段落内容	下線語句の意味	研究 人物の主張	段落内容	比喩 例示の意図	EXCEPT	タイトル 結論

段落要旨

段落	要旨
1	記憶は録画やファイルのようなものだという通説。研究上はおおむね誤り。
2	バートレットの実験：見慣れない民話は再話のたびに見慣れた形に変わる。記憶は再構成。
3	スペースシャトル事故の研究：2年半後の記述は大きく変わったが、本人の確信は高いまま。
4	記憶は保存庫ではなく未来予測の道具。想起と想像は同じ脳領域を使う。
5	記憶は可変的。思い出すたびに変わり、目撃証言の信頼性にも関わる。
6	「ナラティブ・アイデンティティ」：苦難が良い結果につながる物語を語る人ほど幸福度が高い。
7	「レミニセンス・バンプ」：10〜30歳の記憶が多いのは、アイデンティティ形成期だから。
8	人に語ると語った版を覚える。ウェントの比喩：記憶は毎晩少しずつ違う公演をする劇団。
9	兄弟の記憶の食い違い：どちらも嘘ではなく、語り直しで固まった版を信じている。
10	記憶は無価値ではない。危険なのは再構成であることを忘れ、録画とみなすこと。
11	結論：私たちは過去の保管係ではなく著者。注意深く、謙虚に語る責任がある。

各設問の根拠と誤答の型

1 正解 イ　段落内容

根拠 “We imagine that experiences are recorded … like files on a computer or scenes on a video, and that remembering is a matter of finding the right file and pressing “play.””

言い換え recorded / pressing “play” → exact records that can later be replayed（比喩を字義に戻す）

ロ　すり替え　「断片からの再構成」は研究側の見方（第2段落以降）。通説と入れ替えている。

ハ　寄せ集め　computer は比喩。字面どおりに取った。

ニ　寄せ集め　記述なし。むしろ思い出すたびに変わる（第5段落）。

2 正解 ニ　研究・人物の主張

根拠 “Details that seemed strange … dropped out or were replaced by more familiar ones … The students were not lying … guided by their own expectations”

言い換え were not lying → unknowingly ／ guided by their own expectations → to fit their own expectations

イ　逆　“The students were not lying.” と逆。

ロ　逆　奇妙な細部ほど抜け落ちた。逆。

ハ　寄せ集め　再話は何週間・何か月も続いた。記述なし。

3 正解 ロ EXCEPT

根拠 本文は “Yet most were highly confident that their memories were accurate”。記述は変わっても確信は高いまま。正解肢は【本文と逆】。

言い換え Yet が「内容は変わった」と「確信は高い」の逆接を示す。ここを読み落とすと逆の肢を選べない。

イ 本文一致 “On the morning after … write down”（本文一致）。
ハ 本文一致 “from a friend now remembered seeing it on television”（本文一致）。
ニ 本文一致 “insisted that the later version must be the true one”（本文一致）。

4 正解 イ 段落内容

根拠 “it did not evolve to serve as an archive … combine bits of past experience to predict where food might be found tomorrow.”

言い換え did not evolve to serve as an archive → rather than to keep a perfect record ／ predict where food might be found → predict what will happen

ロ 逆 正確に覚える動物の方が “less well equipped”（備えが劣る）。逆。
ハ 逆 過去の想起と未来の想像は “many of the same regions” を使う。逆。
ニ 寄せ集め 難しさの比較は本文にない。

5 正解 ハ 下線語句の意味

根拠 直後 “Each time we call an experience to mind, we may alter it slightly” が下線語の説明。

言い換え 下線語の直後の文は、たいてい下線語の言い換え・具体化。alter → changeable。

イ 別義・連想 記憶の話題からの連想。むしろ逆。
ロ 別義・連想 語尾 -able が同じだけ。
ニ 別義・連想 無関係。

6 正解 ニ 研究・人物の主張

根拠 “Those who describe painful experiences as leading eventually to something good … tend to report greater well-being”

言い換え describe … as leading to something good → interpret … as leading to something positive ／ report greater well-being → feel better about their lives

イ 寄せ集め つらい経験の数と物語の整理を結んだ捏造。
ロ 焦点ずれ 「良い始まり→悪い終わり」の物語の人はむしろ幸福度が低い側。
ハ 寄せ集め 記述なし。

7 正解 ハ 段落内容

根拠 “One explanation is that these are the years in which identity is formed”

言い換え identity is formed → form their sense of who they are（名詞 identity を節で言い換え）

イ 極端語 30歳以降を「すべて」忘れるとは言っていない。極端化。
ロ 寄せ集め at random（無作為に思い出させる）を寄せ集めで使った。

8 正解 ニ 比喩・例示の意図

根拠 “never in quite the same way … The script survives, but each performance is new.”

言い換え each performance is new → re-created each time ／ never in quite the same way → with small variations

イ 逆 “less like a library” と否定された側。
ロ 寄せ集め play（劇）の字面。
ハ 寄せ集め 記述なし。

9 **正解 ハ** EXCEPT

根拠 本文は “Neither is lying”。正解肢は【本文と逆】。

言い換え harden with use → become more fixed through repetition。比喩的動詞は平易な語に直されて本文一致肢になる。

イ 本文一致 “each version has hardened with use”（本文一致）。

ロ 本文一致 “Most of what we remember is broadly accurate”（本文一致）。

ニ 本文一致 “When we treat our recollections as recordings, we become overconfident”（本文一致）。

10 **正解 ロ** タイトル・結論

根拠 通説（記録装置）→ 研究（再構成）→ 物語としての記憶 → 結論 “think of ourselves not as archivists of our past but as its authors”。

言い換え 最終段落の authors と、全体の rebuild（再構成）がタイトルに入っている。

イ 極端語 目撃証言は第5段落の一例。never は極端。

ハ 逆 筆者が否定した通説そのもの。

ニ 焦点ずれ 第3段落の一研究にすぎない。

重要語句

PRACTICE 4 — TARGET TIME 20 MIN.

演習4　図書館とデジタル化

論説（社会・メディア）　約994語　11段落　設問10問　目標20分

次の文を読み、下記の1〜10それぞれに続くものとして、本文の内容ともっともよく合致するものを、各イ〜ニから1つずつ選べ。

[1] In the late 1990s, as the internet spread into homes and offices, a number of confident commentators predicted the end of the public library. Why would anyone travel to a building full of paper, they asked, when all the world's information would soon be available on a screen? A quarter of a century later, the predictions look strange. Libraries in many cities are busier than ever, though not always for the reasons their founders imagined. The library has not disappeared; it has been quietly transformed, and the transformation tells us something about what libraries were for all along.

[2] For most of history, libraries were storehouses. The great library of ancient Alexandria* aimed to collect a copy of every book in the known world, and medieval monasteries guarded their manuscripts as precious possessions. The modern public library, open to anyone and free of charge, is a much more recent invention. In the nineteenth and early twentieth centuries, reformers and philanthropists in Britain and the United States funded thousands of such libraries; one wealthy industrialist alone paid for more than two thousand buildings. Supporters described the public library as "the people's university," a place where workers who had left school early could continue their education on their own terms.

[3] Digitization has extended that mission in remarkable ways. Libraries and archives have scanned millions of books, maps, letters and manuscripts and made them available online. A student in Nairobi can now examine a medieval manuscript held in Oxford without buying a plane ticket, and a historian can search thousands of old newspapers for a single name in a few seconds. Digitization also protects fragile originals, which no longer need to be handled every time someone wishes to consult them.

[4] Yet a digital copy is not the same as a preserved one. Paper, if kept dry and cool, can last for centuries; a book printed in 1500 can still be read today. Digital files are far more delicate. They depend on particular formats, programs and machines, and these change rapidly. Documents saved on the storage disks of the 1980s are already difficult to open, not because the information has decayed but because the equipment needed to read it has disappeared. Some computer scientists have warned of a coming "digital dark age," in which much of the record of our own time becomes unreadable to future generations. Preventing it requires constant, expensive work: files must be copied to new formats again and again.

[5] The problem is even more serious for material that was never printed at all. A great deal of contemporary culture exists only online, in blogs, videos, social media posts and websites that can be

changed or deleted at any moment. Researchers who have checked the links cited in academic articles have found that a large proportion no longer work after only a few years. Much of the online world is, in this sense, ephemeral. Libraries and specialist archives now try to capture and store copies of websites, but they can save only a small fraction of what appears and disappears every day.

[6] Even books that are published digitally create new difficulties. When a library buys a printed book, it owns that copy and may lend it for as long as the pages hold together. E-books are different. Publishers usually sell libraries a license** rather than a copy, often at a price several times higher than what an individual reader would pay, and the license may expire after a fixed period or a set number of loans. Thomas Okafor, who directs the library system of a large city, describes the change bluntly: “We used to buy books. Now we rent shadows of them.”

[7] Meanwhile, the services libraries provide have expanded well beyond books. Many offer free internet access and computers, classes in basic digital skills, help with job applications and government forms, and spaces where small businesses can meet. For people who cannot afford a home connection or a laptop, the library is often the only place where they can complete tasks that are increasingly possible only online, from applying for benefits to booking a medical appointment.

[8] A recent survey of public library users in several cities produced a revealing result. Fewer than half of the visits recorded were made mainly in order to borrow books. Most people came for other reasons: to study in a quiet place, to use the computers, to attend an event, to meet friends, or simply to be somewhere warm and safe. Teenagers in particular described the library as one of the few places where they could spend time without being asked to pay or to leave.

[9] Librarians have also taken on a new role as guides through an overwhelming amount of information. When anyone can publish anything, the difficult task is no longer finding information but judging it. Many libraries now run workshops that teach people how to check where a claim comes from, how to recognize a manipulated image and how to tell research from advertising. In an age of misinformation, these skills may be as important as the ability to read.

[10] Not everyone is persuaded that libraries need buildings at all. Some critics argue that public money should be moved from physical branches to digital services, which can reach more people at lower cost. The argument has a certain logic, but it overlooks who actually depends on the library. Those who would lose most from the closure of a local branch are precisely those with the fewest alternatives: the elderly, the unemployed, recent immigrants and children whose homes are crowded or noisy.

[11] The history of the library suggests that its essence was never the books themselves. It was a promise that knowledge should be available to everyone, regardless of income, and that there should be at least one public space where people are welcome simply because they are members of the community. Digitization has changed the means by which libraries keep that promise. It has not changed the promise.

(Original passage written for this book)

*Alexandria アレクサンドリア（古代エジプトの都市）
**license 利用許諾（ライセンス）

設問

1 According to paragraph 1, the predictions made about libraries in the late 1990s

イ correctly foresaw that libraries would become less busy.
ロ were made mainly by librarians who feared the internet.
ハ proved to be wrong, although libraries have changed considerably.
ニ led many cities to close their libraries.

2 In paragraph 2, supporters' description of the public library as "the people's university" suggests that libraries

イ gave people with limited schooling a way to keep learning by themselves.
ロ required visitors to pass examinations before borrowing books.
ハ were run by universities for the benefit of wealthy industrialists.
ニ aimed to collect a copy of every book in the known world.

3 As discussed in paragraph 3, one advantage of digitization is that

イ it makes it unnecessary to keep the original manuscripts.
ロ it lets students travel to Oxford more cheaply.
ハ it has replaced all printed newspapers.
ニ it allows distant readers to consult rare materials while reducing wear on the originals.

4 According to paragraph 4, digital copies are not a complete solution to the problem of preservation because

イ digital information decays faster than paper when kept dry.
ロ books printed in 1500 can no longer be read.
ハ copying files to new formats damages their content.
ニ the technology required to read them may become unavailable over time.

5 The underlined word "ephemeral" (paragraph 5) is closest in meaning to

イ short-lived.
ロ popular.
ハ unreliable.
ニ expensive.

6 Thomas Okafor's remark, "Now we rent shadows of them" (paragraph 6), refers to the fact that libraries

イ can no longer afford to buy printed books.
ロ lend e-books for as long as their pages hold together.
ハ pay for temporary access to e-books instead of owning permanent copies.
ニ prefer e-books because they are cheaper than printed books.

7 Paragraph 7 mentions all of the following as services that libraries provide EXCEPT

イ lessons in basic computer skills.
ロ free laptops for people to keep at home.
ハ assistance in applying for jobs.
ニ places where small businesses can hold meetings.

8 The survey described in paragraph 8 found that

イ borrowing books was the main purpose of less than half of the visits.

ロ most visitors came mainly to borrow books.

ハ teenagers were often asked to leave the library.

ニ fewer than half of the visitors were satisfied with the library.

9 In paragraph 10, the author responds to critics of library buildings by pointing out that

イ digital services cannot reach as many people as physical branches.

ロ closing local branches would hurt most those who have the fewest other options.

ハ public money should be moved from physical branches to digital services.

ニ elderly people use libraries less often than children do.

10 The most appropriate title for this passage is

イ “The Digital Dark Age: Why Computers Will Erase History.”

ロ “How the Internet Made Public Libraries Unnecessary.”

ハ “Ancient Alexandria and the Dream of a Universal Library.”

ニ “Beyond the Bookshelf: The Library’s Promise in a Digital Age.”

段落要旨

段落	要旨
1	1990年代の「図書館消滅」予測は外れた。図書館は消えずに変容した。
2	保管庫としての図書館から、19〜20世紀の無料の公共図書館へ。「民衆の大学」。
3	デジタル化の恩恵：遠隔地からの希少資料の閲覧と、原本の保護。
4	だがデジタル化は保存ではない。形式・機器の陳腐化と「デジタル暗黒時代」の警告。
5	ネット上の文化は短命。論文のリンク切れ。保存できるのはごく一部。
6	電子書籍は所有でなく利用許諾。高価で期限つき。「影を借りている」。
7	サービスの拡大：ネット接続、技能講座、就職支援。ネット環境のない人に不可欠。
8	調査：本を借りるのが主目的の来館は半数未満。勉強・居場所・安全のための来館。
9	情報を探すより見極める時代。司書が情報の評価法を教える。
10	批判者は建物より電子サービスへと言うが、閉館で最も困るのは選択肢の少ない人。
11	結論：図書館の本質は本ではなく、知識への平等なアクセスという「約束」。

各設問の根拠と誤答の型

1 正解 ハ　段落内容

根拠 “A quarter of a century later, the predictions look strange … The library has not disappeared; it has been quietly transformed”

言い換え the predictions look strange → proved to be wrong ／ has been quietly transformed → have changed considerably

イ　逆　“busier than ever” と逆。

ロ　寄せ集め　予測したのは commentators（評論家）。

ニ　寄せ集め　閉館という因果は記述なし。

2 正解 イ　比喩・例示の意図

根拠 “a place where workers who had left school early could continue their education on their own terms.”

言い換え left school early → limited schooling ／ continue their education on their own terms → keep learning by themselves

ロ　寄せ集め　university の字面からの連想。

ハ　寄せ集め　富豪は資金提供者。大学が運営したとは書いていない。

3 正解 ニ 段落内容

根拠 “A student in Nairobi can now examine a medieval manuscript held in Oxford … Digitization also protects fragile originals, which no longer need to be handled”

言い換え Nairobi から Oxford の写本 → distant readers … rare materials ／ no longer need to be handled → reducing wear on the originals（具体例を一般化）

イ 極端語 原本が不要とは言っていない。第4段落はむしろ逆。
ロ 寄せ集め 「飛行機代なしで見られる」を「安く旅行できる」にねじった。
ハ 極端語 古新聞を検索できるだけ。all は極端。

4 正解 ニ 段落内容

根拠 “not because the information has decayed but because the equipment needed to read it has disappeared.”

言い換え not A but B の B が正解。the equipment needed to read it has disappeared → the technology required to read them may become unavailable

イ すり替え “not because the information has decayed” と明言。否定された側の理由をすり替えた。
ロ 逆 “can still be read today” と逆。
ハ 寄せ集め 移し替えは必要な作業として述べられるだけ。

5 正解 イ 下線語句の意味

根拠 前に “can be changed or deleted at any moment” “no longer work after only a few years”、後に “what appears and disappears every day”。

言い換え in this sense（この意味で）が直前の内容をまとめる合図。前文の「すぐ消える」がそのまま答え。

ロ 別義・連想 オンライン文化からの連想。
ハ 別義・連想 誤情報の話題（第9段落）からの連想。ここは信頼性ではなく「寿命」の話。
ニ 別義・連想 無関係。

6 正解 ハ 研究・人物の主張

根拠 “Publishers usually sell libraries a license rather than a copy … the license may expire after a fixed period or a set number of loans.”

言い換え rent（借りる）→ temporary access ／ a license rather than a copy → instead of owning permanent copies

イ 極端語 紙の本が買えなくなったとは言っていない。
ロ すり替え “for as long as the pages hold together” は紙の本の性質。電子書籍とすり替えた。
ニ 逆 電子書籍は個人価格の数倍。逆。

7 正解 ロ EXCEPT

根拠 本文は “people who cannot afford … a laptop” と利用者の状況を述べるだけで、ノートPCを配るとは書いていない【語の寄せ集め】。

言い換え classes → lessons、help → assistance、spaces → places。EXCEPT の本文一致肢は1語ずつ同義語に置き換えるのが基本。

イ 本文一致 “classes in basic digital skills”（本文一致）。
ハ 本文一致 “help with job applications”（本文一致）。
ニ 本文一致 “spaces where small businesses can meet”（本文一致）。

8 **正解 イ** 研究・人物の主張

根拠 “Fewer than half of the visits recorded were made mainly in order to borrow books.”

言い換え mainly in order to borrow books → borrowing books was the main purpose ／ fewer than half → less than half

ロ 逆 逆。

ハ 逆 10代は「出て行けと言われない数少ない場所」と述べた。逆。

9 **正解 ロ** 段落内容

根拠 “Those who would lose most from the closure of a local branch are precisely those with the fewest alternatives”

言い換え lose most from the closure → closing ... would hurt most ／ the fewest alternatives → the fewest other options

イ 逆 批判者は「デジタルの方が多くに届く」と言い、筆者もそれは否定していない。

ハ すり替え これは批判者の主張。筆者の反論とすり替えた。

ニ 寄せ集め 利用頻度の比較は本文にない。

10 **正解 ニ** タイトル・結論

根拠 結論 “its essence was never the books themselves. It was a promise ... Digitization has changed the means ... It has not changed the promise.”

言い換え 本そのものではない（Beyond the Bookshelf）＋約束（promise）＋デジタル時代。最終段落の要点がそろっている。

イ 極端語 第4段落の一部。erase history は極端。

ロ 逆 第1段落で否定された予測そのもの。

ハ 焦点ずれ 第2段落の一部。範囲が狭い。

PRACTICE 5 — TARGET TIME 20 MIN.

演習5　睡眠と夢の科学

科学記事（研究紹介型）　約967語　11段落　設問10問　目標20分

次の文を読み、下記の1〜10それぞれに続くものとして、本文の内容ともっともよく合致するものを、各イ〜ニから1つずつ選べ。

[1] We spend roughly a third of our lives asleep, yet for most of human history sleep was regarded as little more than an absence. Poets called it the brother of death, and physicians assumed that the sleeping brain simply switched off, like a lamp, until morning. Dreams were treated as messages from gods or spirits, or later as curiosities of interest mainly to psychoanalysts*. Only in the second half of the twentieth century did scientists begin to discover how busy the sleeping brain really is.

[2] The turning point came in 1953, when researchers at the University of Chicago noticed that sleeping subjects periodically moved their eyes rapidly beneath closed lids. During these periods, the brain's electrical activity looked remarkably similar to that of a waking person. When the researchers woke subjects in the middle of such episodes, most reported vivid, story-like dreams; when woken at other times, they reported far fewer. "Rapid eye movement" sleep, or REM sleep, had been discovered, and with it the idea that sleep is not one state but several.

[3] We now know that a night's sleep is organized into cycles of roughly ninety minutes. Each cycle moves from light sleep into deep, slow-wave sleep and then into REM sleep. Most adults pass through four or five such cycles each night. The balance shifts as the night goes on: deep sleep dominates the early cycles, while REM periods grow longer toward morning. This is one reason why people who cut their sleep short by waking early lose a disproportionate share of their dreaming.

[4] One of the most important discoveries of recent decades is that sleep helps to consolidate memories. In experiments with rats, scientists recorded the activity of brain cells as the animals learned to run through a maze. Later, while the rats slept, the same cells fired again in the same order, as if the animals were replaying the route. Studies with human volunteers point in the same direction: people who learn a list of words or a new skill and then sleep remember it better the next day than people who spend the same number of hours awake. Sleep, it seems, is when the brain decides what to keep.

[5] Why we dream remains far more controversial. Some scientists have argued that dreams are a by-product of random activity in the sleeping brain, which the mind, always eager for meaning, weaves into a story. Others suggest that dreaming allows us to rehearse responses to danger in a safe setting, which would explain why so many dreams involve being chased, falling or arriving late. Still others see dreams as a kind of overnight therapy that softens painful emotions. The psychologist Lena Brandt favors a social version of

the rehearsal theory, calling dreams “a flight simulator for our relationships”: in them, she argues, we practice difficult conversations and imagine how others might respond.

[6] Some evidence suggests that dreams can indeed prepare us for real challenges. In a study of students facing a demanding entrance examination for medical school, researchers asked them about their dreams on the night before the test. More than half had dreamed about the exam, usually about arriving late or being unable to answer. Surprisingly, those who had dreamed about the exam tended to achieve higher scores than those who had not. The researchers suggested that anxious dreams might function as a form of mental preparation rather than merely as a sign of stress.

[7] Our sleeping habits are also more historical than we usually assume. A historian studying diaries, letters and court records from preindustrial** Europe has argued that many people once slept in two separate periods, a “first sleep” and a “second sleep,” with an hour or more of wakefulness in between, during which they prayed, talked or simply lay thinking. According to this view, the spread of artificial lighting in the nineteenth century pushed bedtimes later and gradually squeezed the night into a single block of sleep.

[8] Modern life has squeezed it further. Electric light, screens and long working hours have reduced the average amount of sleep in many countries, and teenagers are among those most affected. During adolescence, the body’s internal clock shifts later, so that young people naturally feel sleepy later at night and find it hard to wake early. Early school start times therefore force many teenagers to learn while their brains are still, in effect, in the middle of the night. Several schools that have moved their start times later have reported better attendance and more alert students.

[9] Despite this evidence, many cultures continue to treat sleep as a sign of laziness and sleeplessness as a badge of dedication. Executives boast of needing only four hours a night; students pride themselves on working until dawn. Yet research has shown that staying awake for around eighteen hours impairs reaction time and judgment to a degree comparable to that caused by drinking alcohol. Many accidents on the road and at work have been linked to fatigue. A tired surgeon or driver is not heroic but dangerous.

[10] Ironically, the growing awareness of sleep’s importance has created new problems of its own. Many people now wear devices that measure their sleep every night, and some become so anxious about achieving a perfect score that the anxiety itself keeps them awake. Sleep specialists have even coined a term for this: “orthosomnia,”*** the unhealthy pursuit of ideal sleep. The cure, paradoxically, often involves caring a little less.

[11] The scientific story of sleep, then, is a story of hidden activity. While we lie apparently motionless, the brain sorts the day’s experiences, strengthens some memories and discards others, and runs strange rehearsals we may or may not remember. Sleep is not time taken away from life. It is one of the ways in which life, and the mind that lives it, is maintained.

(Original passage written for this book)

---

*psychoanalyst 精神分析家

**preindustrial 産業化以前の
***orthosomnia オルソソムニア（完璧な睡眠への執着）

設問

1 In paragraph 1, the author explains that for most of history sleep was thought of as

イ a time when the brain is as active as during waking hours.
ロ a subject studied mainly by poets rather than physicians.
ハ an inactive state in which the brain did little or nothing.
ニ a dangerous condition that could lead to death.

2 According to paragraph 2, the researchers who discovered REM sleep found that

イ people dream only when their eyes are completely still.
ロ people woken during periods of rapid eye movement usually reported vivid dreams.
ハ the brain’s activity during sleep is the same throughout the night.
ニ subjects moved their eyes because they had been woken suddenly.

3 As discussed in paragraph 3, people who wake up earlier than usual

イ lose mainly the deep sleep of the early cycles.
ロ lose a larger proportion of their REM sleep than of other stages of sleep.
ハ shorten each sleep cycle to less than ninety minutes.
ニ dream more vividly because REM sleep becomes longer.

4 The underlined word “consolidate” (paragraph 4) is closest in meaning to

イ strengthen.
ロ combine.
ハ replace.
ニ reveal.

5 Based on paragraph 4, all of the following statements are true EXCEPT that

イ certain brain cells in sleeping rats fired in the same order as during learning.
ロ sleep appears to play a role in selecting which memories are kept.
ハ studies with human volunteers have also shown benefits of sleep for learning.
ニ people who stay awake after learning remember more than people who sleep.

6 Lena Brandt calls dreams “a flight simulator for our relationships” (paragraph 5) to suggest that dreams

イ allow us to practice social situations in a safe setting.
ロ are random images with no connection to our daily lives.
ハ often involve traveling by airplane.
ニ help us forget painful conversations completely.

7 The study of students described in paragraph 6 indicates that

イ students who dreamed about failing the exam actually failed it.
ロ most students were too anxious to sleep before the exam.
ハ dreaming about an upcoming exam was associated with better results.
ニ anxious dreams are nothing more than a sign of stress.

8 According to the historian mentioned in paragraph 7, many people in preindustrial Europe

イ rarely slept for more than an hour at a time.

ロ went to bed later than people do today because of artificial lighting.

ハ wrote diaries and letters mainly during the night.

ニ slept in two periods separated by a time of being awake.

9 As discussed in paragraph 8, early school start times are a problem for many teenagers because

イ they spend too much time studying in the middle of the night.

ロ their body clocks shift so that they feel sleepy later at night than before.

ハ schools with later start times have lower attendance.

ニ they need less sleep than younger children.

10 The most appropriate title for this passage is

イ “The Busy Night: What Science Has Learned about Sleep and Dreams.”

ロ “Why Teenagers Should Never Go to School before Ten.”

ハ “Dreams as Messages from the Gods.”

ニ “The Hidden Dangers of Sleep-Tracking Devices.”

演習5 解答・解説 —— 睡眠と夢の科学

設問	1	2	3	4	5	6	7	8	9	10
正解	ハ	ロ	ロ	イ	ニ	イ	ハ	ニ	ロ	イ
型	段落内容	研究 人物の主張	段落内容	下線語句の意味	EXCEPT	比喩 例示の意図	研究 人物の主張	研究 人物の主張	段落内容	タイトル 結論

段落要旨

段落	要旨
1	人生の3分の1は睡眠。長く「脳が止まる受け身の状態」と考えられてきた。
2	1953年、シカゴでREM睡眠を発見。眼球運動中に起こすと鮮明な夢を報告。
3	睡眠は約90分周期。前半は深い睡眠、後半はREMが長い。早起きは夢を多く失う。
4	睡眠は記憶を固める。ラットの迷路の「再生」。人でも学習後の睡眠が効く。
5	夢の機能は諸説（ランダム説・脅威リハーサル説・夜のセラピー説）。ブラント「人間関係のフライトシミュレーター」。
6	医学部受験生の研究：試験の夢を見た学生ほど得点が高い。不安な夢は準備の一種かもしれない。
7	歴史家の説：産業化以前は「第一の眠り」「第二の眠り」の分割睡眠。人工照明が変えた。
8	現代の睡眠不足。思春期は体内時計が後ろにずれる。始業を遅らせた学校で改善。
9	睡眠を怠惰とみなす文化。だが約18時間の覚醒は飲酒に匹敵する判断力の低下をもたらす。
10	睡眠の計測への不安がかえって眠りを妨げる「オルソソムニア」。
11	結論：睡眠は隠れた活動の時間であり、心と生命を保つ営み。

各設問の根拠と誤答の型

1　正解 ハ　段落内容

根拠　“little more than an absence” ／ “physicians assumed that the sleeping brain simply switched off, like a lamp”

言い換え　an absence / switched off → an inactive state … did little or nothing（比喩を字義に戻す）

イ　すり替え　それは20世紀後半以降に分かった研究側の知見。昔の見方とすり替えている。

ロ　寄せ集め　詩人も医師も登場するが、研究主体の比較ではない。

ニ　寄せ集め　“the brother of death” は比喩。危険な状態とは言っていない。

2　正解 ロ　研究・人物の主張

根拠　“When the researchers woke subjects in the middle of such episodes, most reported vivid, story-like dreams”

言い換え　in the middle of such episodes → during periods of rapid eye movement ／ most reported → usually reported

イ　逆　目が動く期間に夢を報告した。逆。

ハ　逆　“sleep is not one state but several” と逆。

ニ　寄せ集め　起こしたから目が動いたのではない。因果の捏造。

3 正解 ロ 段落内容

根拠 “deep sleep dominates the early cycles, while REM periods grow longer toward morning. This is one reason why people who cut their sleep short by waking early lose a disproportionate share of their dreaming.”

言い換え a disproportionate share of their dreaming → a larger proportion of their REM sleep（夢＝REM と結びつける2段階の言い換え）

イ **すり替え** 深い睡眠は夜の前半に多い。前半と後半を入れ替えた。
ハ **寄せ集め** 90分という数字の流用。周期が短くなるとは書いていない。
ニ **寄せ集め** 早起きで夢が鮮明になるという因果は捏造。

4 正解 イ 下線語句の意味

根拠 段落の実験は「眠ると翌日よく覚えている」こと。段落末 “Sleep … is when the brain decides what to keep.” も同じ方向。

言い換え consolidate memories＝記憶を固める（定着させる）。多義語は段落の結論文から意味を逆算する。

ロ **別義・連想** 「統合する」は consolidate の別義（会社の合併など）。記憶を「固める」文脈には合わない。
ハ **別義・連想** 無関係。
ニ **別義・連想** 無関係。

5 正解 ニ EXCEPT

根拠 本文は “people who … then sleep remember it better the next day than people who spend the same number of hours awake”。正解肢は比較の向きを逆にした【本文と逆】。

言い換え point in the same direction → have also shown …。比較構文（A better than B）の向きを逆にするのは定番の作り方。

イ **本文一致** “the same cells fired again in the same order”（本文一致）。
ロ **本文一致** “Sleep … is when the brain decides what to keep”（本文一致）。
ハ **本文一致** “Studies with human volunteers point in the same direction”（本文一致）。

6 正解 イ 比喩・例示の意図

根拠 “a social version of the rehearsal theory … in them … we practice difficult conversations and imagine how others might respond.”

言い換え practice difficult conversations → practice social situations ／ simulator（本物でない練習装置）→ in a safe setting

ロ **すり替え** ランダムな活動説は別の科学者たち（Some scientists）の説。人物と説のすり替え。
ハ **寄せ集め** flight の字面。
ニ **極端語** 痛みを和らげる説はあるが、完全に忘れさせるとは言っていない。

7 正解 ハ 研究・人物の主張

根拠 “those who had dreamed about the exam tended to achieve higher scores than those who had not.”

言い換え tended to achieve higher scores → was associated with better results（因果でなく相関で言い換える点に注意）

イ **逆** 夢を見た学生ほど得点が高かった。逆。
ロ **寄せ集め** 記述なし。
ニ **逆** “rather than merely as a sign of stress” と逆。

8 **正解 ニ** 研究・人物の主張

根拠 “many people once slept in two separate periods … with an hour or more of wakefulness in between”

言い換え wakefulness in between → separated by a time of being awake

ロ すり替え 人工照明が就寝を遅らせたのは19世紀以降。時代のすり替え。

ハ 寄せ集め 日記や手紙は歴史家の史料。夜中に書いたとは書いていない。

9 **正解 ロ** 段落内容

根拠 “During adolescence, the body’s internal clock shifts later, so that young people naturally feel sleepy later at night and find it hard to wake early.”

言い換え the body’s internal clock shifts later → their body clocks shift ／ during adolescence → than before（成長に伴う変化）

イ 寄せ集め “in the middle of the night” は in effect（実質的に）つきの比喩。

ハ 逆 始業を遅らせた学校では出席率が改善した。逆。

ニ 寄せ集め 記述なし。

10 **正解 イ** タイトル・結論

根拠 第1段落末 “how busy the sleeping brain really is” と最終段落 “a story of hidden activity” が全体の主題。

言い換え busy / hidden activity → The Busy Night。冒頭と結論で繰り返される語がタイトルの核になる。

ロ 極端語 第8段落の一部。never と具体的な時刻は本文にない。

ハ 逆 第1段落で昔の見方として紹介されただけ。

ニ 焦点ずれ 第10段落の一部。範囲が狭い。

重要語句

PRACTICE 6 — TARGET TIME 20 MIN.

演習6　方言と言語アイデンティティ

論説（社会言語学）　約955語　10段落　設問10問　目標20分

次の文を読み、下記の1〜10それぞれに続くものとして、本文の内容ともっともよく合致するものを、各イ〜ニから1つずつ選べ。

[1] When Yuki moved from a small town in the north of Japan to study in Tokyo, she made a decision on her first day: she would not let anyone hear how she really spoke. For months she listened carefully to her classmates, copied their intonation and avoided the words she had used all her life. “I felt as if I were wearing a costume,” she recalls. Her experience is far from unusual. In many countries, people who move from the provinces to the capital learn to hide their accents, as though the way they grew up speaking were something to be ashamed of.

[2] Behind such feelings lies an old question: what is the difference between a language and a dialect? Linguists have never found a satisfactory answer based on language alone. Some varieties called “dialects” are so different from one another that their speakers cannot understand each other, while some separate “languages,” such as Norwegian and Swedish, are largely mutually intelligible. A remark often attributed to a twentieth-century scholar of Yiddish* sums up the problem: “A language is a dialect with an army and a navy.” The distinction, in other words, is frequently a matter of politics and power rather than grammar.

[3] The idea of a single correct form of a national language is also relatively recent. Standard languages took shape alongside the modern nation-state, spread by printing, national newspapers and, above all, compulsory schooling. The variety chosen as the standard was usually the speech of the capital or of the educated elite. It was not selected because it was more logical or more beautiful than other varieties, but because its speakers had the power to make their way of speaking the model for everyone else.

[4] For speakers of other varieties, the results could be harsh. In the nineteenth and twentieth centuries, schoolchildren in parts of France, Britain and Japan were punished for using their local speech in class. In some schools, a child caught speaking dialect was made to wear a wooden tag around the neck until another child made the same “mistake.” Generations of children learned that their home language was stigmatized, and many decided not to pass it on to their own children.

[5] Attitudes toward accents have been studied experimentally for decades. In a classic technique, researchers record a single speaker who can use two varieties reading the same passage twice, once in a standard accent and once in a regional one. Listeners, who believe they are hearing two different people, are then asked to rate the speakers. Again and again, such studies have found that listeners judge the standard voice as more intelligent, educated and competent, but the regional voice as warmer, friendlier and more

trustworthy. Because the speaker is the same person, the differences can only come from the listeners' assumptions.

[6] These assumptions have practical consequences. People with strong regional accents report being treated as less capable in job interviews and being mocked in the workplace. Some even report having been advised by teachers or employers to take lessons to "neutralize" their accents. Many respond by "code-switching," using a standard variety at work and their home variety with family and friends. The sociolinguist** Owen Pryce compares this to "a coat you take off at the office door." For some people, he notes, the coat comes off easily. For others, it feels less like a coat than like a part of their skin, and taking it off every morning carries a hidden cost.

[7] At the same time, the map of dialects is changing. Increased mobility, mass media and the internet have led to what linguists call "dialect leveling": many local features are disappearing, and regional varieties are becoming more similar to one another. Yet leveling is not the whole story. In large, diverse cities, new varieties are emerging as young people from many linguistic backgrounds mix features of their parents' languages with the local speech, creating ways of speaking that did not exist a generation ago.

[8] In some places, older dialects are enjoying an unexpected revival. Regional words appear in advertising, on tourist souvenirs and in the speech of popular characters in films and comics. Shops and local governments use dialect slogans to give their regions a friendly, distinctive image. Researchers in Japan have observed that young people who otherwise speak the standard language may borrow dialect expressions, sometimes from regions where they have never lived, to sound warm, humorous or straightforward. Dialect, once a sign of being left behind, has become for them a kind of accessory to be worn on suitable occasions.

[9] Linguists have long insisted that no variety is inherently inferior. Every dialect has a consistent grammar, even when that grammar differs from the standard. The double negatives of some English dialects, as in "I didn't see nothing," are often dismissed as errors, but they follow clear rules and resemble patterns found in standard French, Spanish and many other languages. Calling such forms "illogical" says more about the social status of their speakers than about the forms themselves.

[10] None of this means that standard languages are unnecessary. A shared variety allows people from different regions to communicate easily, and learning it remains an important part of education. The problem arises when the standard is treated not as a useful tool but as the only legitimate way of speaking. The goal, many linguists suggest, should be flexibility without shame: the ability to use the standard when it is needed, and the freedom to speak like oneself the rest of the time. Yuki, now a teacher, has reached a similar conclusion. In her classroom she uses the standard language, but when she tells her students stories about her childhood, she tells them in the voice in which she lived them.

(Original passage written for this book)

*Yiddish イディッシュ語
**sociolinguist 社会言語学者

設問

1 According to paragraph 2, the remark “A language is a dialect with an army and a navy” suggests that

イ languages spread mainly through military conquest.
ロ whether a variety is called a language often depends on political power rather than on linguistic differences.
ハ Norwegian and Swedish speakers cannot understand each other.
ニ dialects are always more difficult to understand than languages.

2 In paragraph 3, the author argues that standard languages

イ existed long before the rise of the modern nation-state.
ロ were chosen because they were more logical than other varieties.
ハ were usually based on the speech of powerful groups rather than on any natural superiority.
ニ were spread mainly by speakers living outside the capital.

3 The underlined word “stigmatized” (paragraph 4) is closest in meaning to

イ protected by law.
ロ widely admired.
ハ looked down upon.
ニ rarely spoken.

4 Based on paragraph 5, all of the following statements about the experiments on accents are true EXCEPT that

イ one person read the same passage in two different accents.
ロ the regional voice was often rated as more trustworthy.
ハ the results reveal assumptions held by the listeners.
ニ the listeners were told that they were hearing the same speaker twice.

5 Owen Pryce’s comparison of code-switching to “a coat you take off at the office door” (paragraph 6) is used to point out that

イ people should dress more formally when they go to work.
ロ changing one’s way of speaking may be easy for some people but costly for others.
ハ code-switching is always a simple and harmless habit.
ニ regional accents disappear completely once people start working.

6 As discussed in paragraph 7, “dialect leveling” refers to a process in which

イ young people in cities create entirely new varieties of speech.
ロ local features are lost and regional varieties grow more alike.
ハ dialects are ranked from highest to lowest in social status.
ニ mass media help to preserve regional differences.

7 According to the researchers in Japan mentioned in paragraph 8, some young people

イ use dialect expressions selectively to give a particular impression of themselves.
ロ refuse to speak the standard language in any situation.
ハ use only the dialect of the region where they grew up.
ニ regard dialect as a sign of being left behind.

8 In paragraph 9, the example of double negatives is used to show that

イ forms regarded as errors may follow regular grammatical rules.

ロ English dialects borrowed their grammar from French and Spanish.

ハ double negatives are illogical and should be corrected.

ニ speakers of standard English never use negative words.

9 Based on the final paragraph, the author would most likely agree that

イ standard languages should no longer be taught in schools.

ロ teachers ought to use only their regional dialect in the classroom.

ハ people should be able to use the standard language when necessary without feeling ashamed of their own way of speaking.

ニ the standard language is the only legitimate way of speaking.

10 The most appropriate title for this passage is

イ “How to Lose a Regional Accent in Three Months.”

ロ “The Disappearance of All Regional Dialects.”

ハ “The History of the Japanese School System.”

ニ “Language, Power and Belonging: Rethinking How We View Dialects.”

段落要旨

段落	要旨
1	地方出身のユキは上京して訛りを隠した。多くの国で見られる経験。
2	言語と方言の区別は言語学的には決まらない。「軍隊と海軍を持つ方言」＝政治と権力の問題。
3	標準語は国民国家とともに形成。首都・エリートの言葉が選ばれたのは権力のため。
4	方言を話した子どもへの罰（方言札）。方言は恥とされ、継承されなくなった。
5	同一話者による実験：標準アクセントは有能、地方アクセントは温かく信頼できると評価された。
6	面接や職場での不利益。コード・スイッチング。プライスの比喩「職場の入口で脱ぐコート」。
7	方言の平準化が進む一方、多言語の大都市では新しい話し方が生まれている。
8	方言の復活：広告やキャラクター。若者は方言を「アクセサリー」として選んで使う。
9	どの方言も規則的な文法を持つ。二重否定は誤りではない。
10	結論：標準語は必要だが唯一の正解ではない。恥じることなく使い分ける柔軟性を。

各設問の根拠と誤答の型

1　正解 ロ　比喩・例示の意図

根拠　直後 “The distinction, in other words, is frequently a matter of politics and power rather than grammar.”

言い換え　in other words（言い換えれば）の後ろが答え。politics and power rather than grammar → political power rather than linguistic differences

イ　寄せ集め　army / navy の字面から「軍事征服」を連想させた。

ハ　逆　“largely mutually intelligible” と逆。

ニ　極端語　方言同士で通じない例はあるが、always は極端。

2　正解 ハ　段落内容

根拠　“the speech of the capital or of the educated elite. It was not selected because it was more logical or more beautiful ... but because its speakers had the power”

言い換え　the capital or the educated elite / had the power → powerful groups ／ more logical or more beautiful → natural superiority（2語を上位語でまとめる）

イ　逆　“relatively recent ... took shape alongside the modern nation-state” と逆。

ロ　逆　“It was not selected because it was more logical” と逆。

ニ　すり替え　標準になったのは首都・エリートの言葉。内と外をすり替えた。

3 正解 ハ 下線語句の意味

根拠 方言を話すと罰として札を下げさせられた → 子どもは自分の言葉が「恥ずべきもの」と学んだ → 子に伝えなくなった。

言い換え 前（罰）と後ろ（継承をやめる）に挟まれた語は、その因果の中間＝「見下された」。

イ 別義・連想 逆向き。
ロ 別義・連想 逆。
ニ 別義・連想 結果（継承されなくなる）と意味の混同。

4 正解 ニ EXCEPT

根拠 本文は “Listeners, who believe they are hearing two different people”。正解肢は【本文と逆】。

言い換え 実験の「方法」の細部（被験者が何を知らされていたか）を逆にするのは研究型 EXCEPT の定番。

イ 本文一致 “a single speaker … reading the same passage twice”（本文一致）。
ロ 本文一致 “the regional voice as warmer, friendlier and more trustworthy”（本文一致）。
ハ 本文一致 “the differences can only come from the listeners’ assumptions”（本文一致）。

5 正解 ロ 比喩・例示の意図

根拠 “For some people … the coat comes off easily. For others, it feels … like a part of their skin, and taking it off every morning carries a hidden cost.”

言い換え For some people … For others … の対比を “easy for some people but costly for others” とまとめている。

イ 寄せ集め coat / office の字面。
ハ 極端語 一部の人には簡単だが “a hidden cost” を負う人もいる。always は誤り。
ニ 極端語 職場で使い分けるだけ。completely は極端。

6 正解 ロ 段落内容

根拠 “many local features are disappearing, and regional varieties are becoming more similar to one another.”

言い換え disappearing → are lost ／ becoming more similar to one another → grow more alike

イ すり替え 都市の新しい変種は “Yet leveling is not the whole story” の後の、別の現象。
ハ 寄せ集め level（水準）の字面から序列を連想させた。
ニ 逆 マスメディアは平準化の原因。逆。

7 正解 イ 研究・人物の主張

根拠 “may borrow dialect expressions … to sound warm, humorous or straightforward … a kind of accessory to be worn on suitable occasions.”

言い換え to sound warm, humorous … → to give a particular impression ／ on suitable occasions → selectively

ロ 極端語 普段は標準語を話す（otherwise speak the standard language）若者の話。
ハ 逆 住んだことのない地域の方言も借りる。逆。
ニ すり替え 「取り残された印」は昔の見方。今の若者の見方とすり替えた。

8 正解 イ 比喩・例示の意図

根拠 “are often dismissed as errors, but they follow clear rules”

言い換え dismissed as errors → regarded as errors ／ follow clear rules → follow regular grammatical rules

ロ 寄せ集め resemble（似ている）を「借用した」に捏造。
ハ 逆 筆者は illogical という評価を退ける。逆。
ニ 極端語 記述なし。never は極端。

9 正解 ハ タイトル・結論

根拠 “The goal … should be flexibility without shame: the ability to use the standard when it is needed, and the freedom to speak like oneself the rest of the time.”

言い換え flexibility without shame → without feeling ashamed ／ when it is needed → when necessary

イ 逆 “learning it remains an important part of education” と逆。

ロ すり替え ユキは授業では標準語、子ども時代の話は方言。使い分けをすり替えた。

ニ 逆 それこそが問題とされた見方。逆。

10 正解 ニ タイトル・結論

根拠 言語と方言の区別＝権力（第2〜4段落）→ 偏見（第5〜6段落）→ 変化と復活（第7〜8段落）→ 結論（第10段落）。

言い換え Power（第2〜3段落）と Belonging（アイデンティティ、第1・10段落）の両方をカバーするのは正解だけ。

イ 逆 冒頭のユキの行動は、筆者が問題提起の材料にしたもの。

ロ 極端語 平準化は進むが、新しい変種の誕生や復活もある。All は極端。

ハ 焦点ずれ 学校の話は第4段落の一部。

PRACTICE 7 — TARGET TIME 20 MIN.

演習7　写真と記憶

科学記事（心理学・メディア）　約958語　11段落　設問10問　目標20分

次の文を読み、下記の1〜10それぞれに続くものとして、本文の内容ともっともよく合致するものを、各イ〜ニから1つずつ選べ。

[1] At a concert, the moment the band begins its most famous song, thousands of arms rise into the air, each holding a glowing phone. Many in the audience will watch much of the performance through a small screen, determined to capture it. The impulse is understandable: we want to keep what is precious. Yet it raises a question that psychologists have only recently begun to investigate. Does photographing an experience help us remember it, or does it allow the experience to slip away?

[2] For most of photography's history, the question hardly arose, because photographs were scarce. In the nineteenth century, having a portrait made was a formal and expensive occasion, and sitters had to remain still for long exposures*. The situation changed around 1900, when an inexpensive box camera made it possible for ordinary families to take their own pictures. The family snapshot was born. Even then, film and printing cost money, so each picture was chosen with some care. The results were kept in albums, which were taken out on holidays and shown to visitors, and the same images were looked at again and again over many years.

[3] Today the situation is reversed. According to industry estimates, well over a trillion photographs are taken every year, most of them with phones. Taking a picture costs nothing, and so we take dozens where our grandparents took one. But abundance has changed the way photographs are used. The great majority are never printed, rarely shared beyond a small circle and seldom viewed again after the first few days. Many people own tens of thousands of images they will never look at.

[4] Experiments suggest that the act of taking a photograph can also affect what we remember. In one well-known study, participants were led on a tour of an art museum and asked to observe some objects and to photograph others. The next day, they remembered fewer of the objects they had photographed, and fewer details about them, than of the objects they had simply looked at. The researcher called this the "photo-taking impairment effect." Interestingly, the effect disappeared when participants were asked to zoom in on a particular part of an object: focusing the camera on a detail seemed to require the kind of attention that supports memory.

[5] One explanation draws on the idea of "cognitive offloading."** When we know that information is stored somewhere outside our heads, whether in a notebook, a search engine or a camera, we tend to make less effort to store it ourselves. The camera becomes a kind of external memory, and the brain, trusting it,

relaxes. In many situations this is efficient; there is no need to memorize what can easily be looked up. The difficulty is that experiences, unlike phone numbers, cannot be fully stored in an image.

[6] It would be wrong, however, to conclude that photographs are the enemy of memory. Looking at a photograph can prompt recollections that would otherwise remain out of reach, bringing back not only the scene in the image but also sounds, smells and feelings that the camera never recorded. This is why care workers sometimes use old photographs in conversations with people who suffer from memory loss. A single picture of a wedding or a childhood home can open the way to a flood of memories and help a person reconnect with family members.

[7] Photographs can also mislead memory. In a series of experiments, researchers showed adults photographs of themselves as children, supplied by their families. One of the pictures, however, had been altered to show the participant on a hot-air balloon*** ride that had never taken place. After being asked to think about the images over several days, roughly half of the participants came to remember at least some details of the balloon ride, sometimes describing the view or how they had felt. A convincing image, it seems, can plant an experience that never happened.

[8] Even genuine photographs give a partial picture. Family albums record birthdays, holidays and smiling faces; they rarely include arguments, illnesses or ordinary afternoons of boredom. Over time, the album can become the family's official history, and the moments outside the frame fade. The photographer Daniel Ross likes to remind his students that "a photograph is not a window onto the past but a keyhole." We see a narrow slice of a scene, he explains, and our imagination quietly supplies the rest.

[9] Social media have added another layer. Many photographs today are taken not to remember an experience but to show it to others, and this changes the experience itself. Studies suggest that when people take photographs mainly for their own enjoyment, photography can increase their engagement with what they are doing. When they take pictures with the intention of sharing them, however, they tend to enjoy the experience less, perhaps because part of their attention is occupied with how the images will look to an audience.

[10] What should we do with this knowledge? Few people will give up their cameras, and there is no reason to. But researchers suggest that we photograph more deliberately: taking fewer pictures, choosing details rather than recording everything, and, above all, looking at our photographs afterwards. A small selection of images, revisited and talked about, may do more for memory than thousands stored and forgotten.

[11] The camera was invented to fix moments that would otherwise vanish, and it does that remarkably well. But memory is not a matter of storage alone. It depends on attention at the time and on returning to the past later, and no device can do either of these things for us. The concert will be remembered best not by those who filmed it most completely, but by those who, at least for one song, lowered their phones and listened.

(Original passage written for this book)

*exposure 露出（時間）
**cognitive offloading 認知的オフローディング
***hot-air balloon 熱気球

設問

1 According to paragraph 2, the inexpensive box camera introduced around 1900

イ allowed people to take as many pictures as they wished at no cost.
ロ required sitters to remain still for long exposures.
ハ enabled ordinary families to take their own photographs.
ニ made family albums less popular than formal portraits.

2 As discussed in paragraph 3, the abundance of digital photographs has led to a situation in which

イ people print more photographs than their grandparents did.
ロ photographs are shared more widely than ever with strangers.
ハ most images are hardly ever looked at after they are taken.
ニ people take fewer pictures but choose them more carefully.

3 Based on paragraph 4, all of the following statements about the museum study are true EXCEPT that

イ participants both observed and photographed objects during the tour.
ロ zooming in on a detail made participants' memory of the object even worse.
ハ participants' memory was tested on the following day.
ニ participants recalled fewer details of the objects they had photographed.

4 According to paragraph 5, the idea of "cognitive offloading" suggests that

イ people make less effort to remember things they know are stored elsewhere.
ロ cameras can store experiences more fully than the brain can.
ハ memorizing phone numbers is more important than remembering experiences.
ニ the brain works harder when it relies on a search engine.

5 The underlined word "prompt" (paragraph 6) is closest in meaning to

イ delay.
ロ record.
ハ trigger.
ニ hurry.

6 The experiments described in paragraph 7 showed that

イ most adults clearly remember balloon rides from their childhood.
ロ an altered photograph could lead people to remember an event that never occurred.
ハ families often supply false photographs to researchers.
ニ all of the participants immediately recognized the altered photograph.

7 Daniel Ross says that “a photograph is not a window onto the past but a keyhole” (paragraph 8) in order to emphasize that

イ photographs should be taken through windows to improve the light.

ロ family albums are the most accurate record of family history.

ハ photographers must keep their work secret.

ニ a photograph shows only a limited part of a scene, which viewers complete with their imagination.

8 According to the studies mentioned in paragraph 9, people who take photographs mainly in order to share them

イ become more engaged in what they are doing.

ロ take more attractive pictures than other people.

ハ remember the experience better because they have an audience.

ニ tend to enjoy the experience less than those who take photographs for themselves.

9 In paragraph 10, the author recommends that people

イ take photographs more selectively and spend time looking at them later.

ロ give up using cameras in order to improve their memory.

ハ store as many images as possible in case they are needed.

ニ talk about their photographs instead of looking at them.

10 The most appropriate title for this passage is

イ “The Invention of the Box Camera around 1900.”

ロ “Why Concerts Should Ban Smartphones.”

ハ “Photographs as Perfect Records of the Past.”

ニ “Remembering through the Lens: How Photographs Shape Our Memories.”

演習7 解答・解説 —— 写真と記憶

設問	1	2	3	4	5	6	7	8	9	10
正解	ハ	ハ	ロ	イ	ハ	ロ	ニ	ニ	イ	ニ
型	段落内容	段落内容	EXCEPT	段落内容	下線語句の意味	研究 人物の主張	比喩 例示の意図	研究 人物の主張	段落内容	タイトル 結論

段落要旨

段落	要旨
1	コンサートでスマホを掲げる群衆。撮影は記憶を助けるのか、逃がすのか。
2	写真は長く希少だった。1900年頃の安価な箱型カメラで家族写真が誕生し、何度も見返された。
3	今は年1兆枚超。撮影は無料だが、大半は二度と見られない。
4	美術館の実験：撮影した物の記憶が劣る「撮影による記憶減損効果」。細部をズームすると消える。
5	「認知的オフローディング」：外部に保存されると思うと、自分では覚えようとしない。
6	一方で写真は記憶を呼び起こす。記憶障害のある人との会話にも使われる。
7	加工した気球の写真で、約半数が「なかった体験」を思い出した。写真は記憶を歪めうる。
8	アルバムは笑顔だけを記録し、家族の公式史になる。ロス「写真は窓ではなく鍵穴」。
9	共有目的の撮影は楽しさを減らし、自分のための撮影は没入を高める。
10	提案：意図的に、少なく、細部を選び、後で見返す。
11	結論：記憶は保存だけでなく、その場の注意と後の振り返りで成り立つ。

各設問の根拠と誤答の型

1　正解 ハ　段落内容

根拠　“an inexpensive box camera made it possible for ordinary families to take their own pictures.”

言い換え　made it possible for … to → enabled … to（構文の書き換え）

イ　逆　“film and printing cost money, so each picture was chosen with some care” と逆。

ニ　逆　アルバムは何度も見返された。逆。

2　正解 ハ　段落内容

根拠　“The great majority are never printed, rarely shared beyond a small circle and seldom viewed again after the first few days.”

言い換え　the great majority → most ／ seldom viewed again → hardly ever looked at

イ　逆　大半は印刷されない。逆。

ロ　逆　“rarely shared beyond a small circle” と逆。

ニ　すり替え　「少なく撮って慎重に選ぶ」のは祖父母世代（第2段落）。時代のすり替え。

3 正解 ロ EXCEPT

根拠 本文は “the effect disappeared when participants were asked to zoom in”。悪化ではなく効果が消えた。正解肢は【本文と逆】。

言い換え Interestingly（興味深いことに）は「予想外の例外」の合図。EXCEPT 問題の正解はこうした例外部分を逆にして作られやすい。

イ 本文一致 “asked to observe some objects and to photograph others”（本文一致）。
ハ 本文一致 “The next day, they remembered fewer …”（本文一致）。
ニ 本文一致 “fewer details about them”（本文一致）。

4 正解 イ 段落内容

根拠 “When we know that information is stored somewhere outside our heads … we tend to make less effort to store it ourselves.”

言い換え stored somewhere outside our heads → stored elsewhere ／ store it ourselves → remember

ロ 逆 “experiences … cannot be fully stored in an image” と逆。
ハ 寄せ集め phone numbers は対比の例。重要性の比較はない。
ニ 逆 外部に頼ると脳は relaxes。逆。

5 正解 ハ 下線語句の意味

根拠 目的語は recollections（思い出）。直後 “bringing back … sounds, smells and feelings” ／ “open the way to a flood of memories”。

言い換え 動詞 prompt＝（反応・記憶を）引き起こす。品詞を確認すれば形容詞の意味（迅速な）は消せる。

イ 別義・連想 逆向き。
ロ 別義・連想 カメラからの連想。写真は「記録しなかった」音や匂いまで呼び起こす。
ニ 別義・連想 形容詞 prompt（迅速な）からの連想。

6 正解 ロ 研究・人物の主張

根拠 “roughly half of the participants came to remember at least some details of the balloon ride … A convincing image … can plant an experience that never happened.”

言い換え had been altered → an altered photograph ／ plant an experience that never happened → remember an event that never occurred

イ 寄せ集め 気球の旅は実際にはなかった。
ハ すり替え 写真を加工したのは研究者。家族は本物を提供した。
ニ 極端語 約半数が細部を「思い出した」。all / immediately は極端。

7 正解 ニ 比喩・例示の意図

根拠 “We see a narrow slice of a scene … and our imagination quietly supplies the rest.”

言い換え a narrow slice → only a limited part ／ imagination supplies the rest → viewers complete with their imagination

イ 寄せ集め window の字面。
ロ 逆 アルバムは枠外を消し、偏った「公式の歴史」になる。逆。
ハ 寄せ集め keyhole（鍵穴）からの連想。

8 **正解 ニ** 研究・人物の主張

根拠 “When they take pictures with the intention of sharing them, however, they tend to enjoy the experience less”

言い換え with the intention of sharing them → mainly in order to share them

イ **すり替え** それは自分のために撮る場合。対象のすり替え。

ロ **寄せ集め** 記述なし。

ハ **寄せ集め** 記述なし。注意が観客に奪われるという趣旨とも合わない。

9 **正解 イ** 段落内容

根拠 “photograph more deliberately: taking fewer pictures, choosing details … and, above all, looking at our photographs afterwards.”

言い換え deliberately / taking fewer pictures → more selectively ／ looking at … afterwards → spend time looking at them later

ロ **逆** “Few people will give up their cameras, and there is no reason to.” と逆。

ハ **逆** 大量に保存して忘れるより少数を見返す方がよいと述べる。逆。

ニ **寄せ集め** talked about は revisited と並ぶ行為。「代わりに」は捏造。

10 **正解 ニ** タイトル・結論

根拠 写真の歴史 → 撮影と記憶（減損効果・オフローディング）→ 想起の手がかり → 記憶の歪み → 結論 “memory is not a matter of storage alone”。

言い換え 助ける（第6段落）面も妨げる・歪める（第4・7段落）面も含む中立的な shape が鍵。

イ **焦点ずれ** 第2段落の一部。

ロ **極端語** 筆者は撮影をやめろとは言わない（第10段落）。

ハ **逆** 写真は部分的で記憶を歪めうると論じた。逆。

重要語句

PRACTICE 8 — TARGET TIME 20 MIN.

演習8　散歩と思考

論説エッセイ（思想史・心理学）　約965語　10段落　設問10問　目標20分

次の文を読み、下記の1〜10それぞれに続くものとして、本文の内容ともっともよく合致するものを、各イ〜ニから1つずつ選べ。

[1] There is an old Latin phrase, *solvitur ambulando*, which means “it is solved by walking.” It is said to have been used in ancient times as a reply to philosophers who argued that motion was impossible: the answer was simply to get up and walk. Over the centuries, however, the phrase has acquired a broader meaning. Many people have found that problems which seem impossible at a desk become clearer after a walk, as if the movement of the body loosened something in the mind.

[2] History offers plenty of examples. Aristotle was said to lecture while strolling with his students, which is one explanation of why his followers became known as the “Peripatetics,”* from a Greek word for walking about. The German philosopher Immanuel Kant took a walk at the same hour every afternoon, so regularly that, according to a popular story, his neighbors set their clocks by him. The poet William Wordsworth composed much of his verse out of doors, and a friend once estimated that he had walked many tens of thousands of miles in his lifetime. Charles Darwin had a gravel path laid out behind his house, which he called his “thinking path,” and walked around it several times a day while working through difficult problems.

[3] Such stories might be dismissed as the habits of a few unusual individuals. Yet the idea that walking aids thought has also been tested in the laboratory. In a series of experiments at an American university, participants were asked to come up with as many creative uses as they could for everyday objects, such as a button or a tire. Those who were walking produced considerably more ideas than those who were sitting, and the benefit held even when the walking took place on a treadmill** facing a blank wall. Moreover, the effect continued for a short time after the participants sat down again. Walking did not, however, help with every kind of task. When participants had to find a single correct answer to a puzzle, walkers performed no better than those who sat.

[4] Why should walking encourage creative thinking in particular? One explanation is that gentle physical activity slightly raises our level of energy and improves our mood, both of which make it easier to produce ideas. Another concerns the rhythm of walking. Because walking at a comfortable pace requires little conscious control, it leaves the mind free to meander, drifting from one thought to another. Psychologists have linked this kind of mind-wandering to creativity: unexpected connections often appear when we are not trying hard to find them.

[5] The place in which we walk matters too. Researchers who study what they call “attention restoration” have found that a walk through a park or along a river can refresh the ability to concentrate more effectively than a walk along a busy street. Natural settings, they suggest, hold our attention gently, without the constant demands of traffic, advertisements and crowds, and so give the mental resources we use for focused work a chance to recover.

[6] Over longer periods, walking may also protect the brain. Studies of older adults have found that those who walk regularly tend to perform better on tests of memory. In one experiment, older volunteers who took up a program of brisk walking for a year showed growth in a region of the brain closely involved in memory, while those who did only stretching exercises did not. Walking is not a cure for the decline that often comes with age, but it appears to be one of the simplest ways of slowing it.

[7] It is ironic, then, that walking has disappeared from so many people’s daily lives. In cities and suburbs designed around cars, walking is often unpleasant or even dangerous, and many people now walk only when they have scheduled time for “exercise.” Many children are now driven to school even when it is only a short walk away. Even the popular goal of ten thousand steps a day has a revealing history: it is widely reported to have begun not as a medical recommendation but as part of a marketing campaign for a Japanese pedometer*** in the 1960s. Walking, once an ordinary part of getting from place to place, has become an activity to be measured.

[8] Writers who love walking tend to resist this approach. The essayist Ellen Marsh, who has written several books about long-distance walks, describes walking as “letting the mind off the leash.” When we walk without a destination or a step count, she argues, the mind is allowed to run where it likes, to chase a passing thought and return with something unexpected. A walk that is measured and timed, by contrast, keeps the mind on a short rope.

[9] Walking can also change the way people talk to one another. Conversations held side by side, while both people look ahead rather than at each other, often feel less confrontational than those held face to face across a table. Some therapists now meet clients outdoors for this reason, and some companies encourage “walking meetings,” in which colleagues discuss a problem while moving. Parents of teenagers sometimes report that their children open up more readily on a walk than at the dinner table. Walking together, it seems, makes it easier to say difficult things.

[10] None of this means that every problem can be solved by a stroll. Some tasks require careful calculation at a desk, and walking cannot replace knowledge, effort or rest. But the evidence suggests that the habit of walking, especially walking without a strict purpose, supports kinds of thinking that are difficult to achieve while sitting still. In an age that values constant productivity, a walk may look like time wasted. It is often, in fact, time in which the most important work is quietly being done.

(Original passage written for this book)

*Peripatetics 逍遥（しょうよう）学派
**treadmill ランニングマシン

***pedometer 歩数計

設問

1 In paragraph 2, the examples of Aristotle, Kant, Wordsworth and Darwin are given to show that

イ philosophers walk more than poets and scientists do.
ロ walking has been part of the working habits of many notable thinkers.
ハ walking was more common in the past because there were no cars.
ニ these thinkers became famous because they walked long distances.

2 Based on paragraph 3, all of the following statements about the experiments are true EXCEPT that

イ walking also improved performance on puzzles with a single correct answer.
ロ participants were asked to think of new uses for familiar objects.
ハ walking indoors on a treadmill still produced a benefit.
ニ the advantage of walking lasted briefly after participants stopped.

3 The underlined word “meander” (paragraph 4) is closest in meaning to

イ hurry.
ロ rest.
ハ wander.
ニ focus.

4 As discussed in paragraph 4, one reason walking may encourage creative thinking is that

イ it forces people to concentrate hard on a single problem.
ロ it makes people physically exhausted, which calms the mind.
ハ it prevents the mind from wandering away from the task.
ニ it requires little conscious effort, which allows thoughts to move freely.

5 Based on paragraphs 5 and 6, all of the following statements are true EXCEPT that

イ walking along a busy street restores concentration better than walking in a park.
ロ natural settings seem to make fewer demands on our attention.
ハ older adults who walk regularly tend to do better on memory tests.
ニ walking appears to slow, though not cure, the decline that comes with age.

6 According to paragraph 7, the goal of ten thousand steps a day

イ is said to have originated in an effort to sell a product rather than in medical research.
ロ was first recommended by doctors in Japan in the 1960s.
ハ is the minimum amount of walking needed to prevent illness.
ニ was created by city planners who wanted fewer cars.

7 Ellen Marsh’s description of walking as “letting the mind off the leash” (paragraph 8) suggests that

イ people should always walk with a dog.
ロ walks should be carefully measured and timed.
ハ long-distance walking is too tiring for most writers.
ニ walking without fixed goals gives the mind freedom to follow its own course.

8 As discussed in paragraph 9, conversations held while walking

イ are more confrontational than those held across a table.

ロ have replaced therapy sessions in most clinics.

ハ are effective only between parents and teenagers.

ニ may feel less tense because people look ahead instead of facing each other.

9 Based on the final paragraph, the author concludes that

イ every problem can eventually be solved by taking a walk.

ロ walking is a waste of time in a productive society.

ハ walking supports some kinds of thinking, even though it cannot solve every problem.

ニ rest is more important for thinking than walking.

10 The most appropriate title for this passage is

イ “The Daily Routines of Famous Philosophers.”

ロ “Solved by Walking: How Moving the Body Frees the Mind.”

ハ “Why Ten Thousand Steps Is the Perfect Goal.”

ニ “Walking Meetings and the Future of Office Work.”

演習8 解答・解説 —— 散歩と思考

設問	1	2	3	4	5	6	7	8	9	10
正解	ロ	イ	ハ	ニ	イ	イ	ニ	ニ	ハ	ロ
型	比喩 例示の意図	EXCEPT	下線語句の意味	段落内容	EXCEPT	段落内容	研究 人物の主張	段落内容	タイトル 結論	タイトル 結論

段落要旨

段落	要旨
1	ラテン語 solvitur ambulando（歩けば解ける）。体を動かすと心がほぐれる。
2	歴史上の例：アリストテレスの逍遥学派、カントの散歩、ワーズワース、ダーウィンの「思索の小道」。
3	実験：歩くと物の使い道のアイデアが増える（ランニングマシンでも）。正解が1つの問題には効果なし。
4	理由：軽い運動で気分が上向く／歩くリズムが心をさまよわせ、思いがけない結びつきを生む。
5	「注意回復」：公園や川沿いの散歩は、繁華街より集中力を回復させる。
6	長期的効果：定期的に歩く高齢者は記憶力が高い。1年の早歩きで記憶に関わる脳領域が増大。
7	皮肉にも歩行は生活から消えた。1万歩は医学ではなく歩数計の宣伝に由来するとされる。
8	エッセイストのマーシュ「心のひもを外す」。目的も歩数もない散歩が心を自由にする。
9	並んで歩く会話は対立的になりにくい。屋外カウンセリング、ウォーキング・ミーティング。
10	結論：散歩ですべては解決しないが、座ったままでは難しい種類の思考を支える。

各設問の根拠と誤答の型

1　正解 ロ　比喩・例示の意図

根拠　段落冒頭 “History offers plenty of examples.” ― 第1段落の「歩くと問題が解ける」を歴史上の人物で例証する段落。

言い換え　examples of A, B, C, D → many notable thinkers（具体的な人名を上位語でまとめる）

イ　寄せ集め　職業ごとの比較は本文にない。

ニ　寄せ集め　歩いたから有名になったという因果は捏造。

2　正解 イ　EXCEPT

根拠　本文は “walkers performed no better than those who sat”。正解肢は【本文と逆】。

言い換え　however が導く「効果がなかった例外」が EXCEPT 問題の正解の材料になる。everyday → familiar、continued for a short time → lasted briefly。

ロ　本文一致　“creative uses … for everyday objects”（本文一致）。

ハ　本文一致　“even when the walking took place on a treadmill facing a blank wall”（本文一致）。

ニ　本文一致　“the effect continued for a short time after the participants sat down again”（本文一致）。

3 正解 ハ 下線語句の意味

根拠 直後 “drifting from one thought to another” と、次の文の mind-wandering が下線語の言い換え。

言い換え 下線語の直後の分詞構文（drifting …）が意味の説明になっている。

イ 別義・連想 walking からの連想。
ロ 別義・連想 「ほっと休む」という連想。
ニ 別義・連想 反対の意味。

4 正解 ニ 段落内容

根拠 “Because walking at a comfortable pace requires little conscious control, it leaves the mind free to meander”

言い換え requires little conscious control → requires little conscious effort ／ leaves the mind free to meander → allows thoughts to move freely

イ 逆 心がさまようことを許すのであって、集中を強いるのではない。逆。
ロ 逆 “slightly raises our level of energy”。疲れさせるのではない。
ハ 逆 mind-wandering が創造性につながると述べる。逆。

5 正解 イ EXCEPT

根拠 本文は公園や川沿いの散歩の方が “more effectively than a walk along a busy street”。正解肢は比較の向きを入れ替えた【本文と逆】。

言い換え not A but B（治療ではないが遅らせる）を though not A で言い換えた肢は本文一致。

ロ 本文一致 “hold our attention gently, without the constant demands”（本文一致）。
ハ 本文一致 “those who walk regularly tend to perform better on tests of memory”（本文一致）。
ニ 本文一致 “not a cure … but … one of the simplest ways of slowing it”（本文一致）。

6 正解 イ 段落内容

根拠 “it is widely reported to have begun not as a medical recommendation but as part of a marketing campaign for a Japanese pedometer”

言い換え is widely reported to have begun → is said to have originated ／ a marketing campaign for a pedometer → an effort to sell a product

ロ すり替え “not as a medical recommendation”。医師と販売をすり替えた。
ハ 極端語 記述なし。断定的すぎる。
ニ 寄せ集め 車中心の都市の話と結びつけた捏造。

7 正解 ニ 研究・人物の主張

根拠 “When we walk without a destination or a step count … the mind is allowed to run where it likes”

言い換え without a destination or a step count → without fixed goals ／ run where it likes → follow its own course

イ 寄せ集め leash（ひも）の字面から犬を連想させた。
ロ 逆 測定・時間管理された散歩は心を “on a short rope” にする。逆。
ハ 寄せ集め 記述なし。

8 **正解 ニ** 段落内容

根拠 “Conversations held side by side, while both people look ahead rather than at each other, often feel less confrontational”

言い換え less confrontational → less tense ／ look ahead rather than at each other → look ahead instead of facing each other

イ 逆 逆。

ロ 極端語 “Some therapists” が屋外で会うだけ。most は過大。

ハ 極端語 親と10代は一例。only は極端。

9 **正解 ハ** タイトル・結論

根拠 “None of this means that every problem can be solved by a stroll ... But the evidence suggests that the habit of walking ... supports kinds of thinking that are difficult to achieve while sitting still.”

言い換え None of this means A. But B. → B, even though not A（譲歩＋主張の構造を1文に）

イ 極端語 冒頭の “None of this means that every problem can be solved by a stroll” と逆。

ロ 逆 “may look like time wasted. It is often, in fact, time in which the most important work is ... being done.” と逆。

ニ 寄せ集め rest は散歩で代替できないものの一つとして出るだけ。比較はない。

10 **正解 ロ** タイトル・結論

根拠 第1段落の solvitur ambulando と、全体を通じた「体を動かすと心が自由になる」という主張。

言い換え 冒頭のキーフレーズ（it is solved by walking）がタイトルに再登場するのは典型。

イ 焦点ずれ 第2段落の一部。

ハ 逆 1万歩は「測定される歩行」の例として批判的に扱われた。

ニ 焦点ずれ 第9段落の一部。

64	walkers performed no better	(×) walking also improved performance	否定の反転（EXCEPT）	演習8
65	requires little conscious control	requires little conscious effort	同義語	演習8
66	not a cure ... but one of the ways of slowing it	slow, though not cure, the decline	構文転換	演習8
67	a marketing campaign for a pedometer	an effort to sell a product	上位語化	演習8
68	less confrontational	less tense	同義語	演習8
69	A contributed to B	A was one of the causes of B	因果の明示	一般
70	is not necessarily ...	is not always ...	部分否定	一般
71	far from ...	not at all ...	否定表現	一般
72	there is little evidence that ...	it is doubtful that ...	否定→疑い	一般
73	A, rather than B	not B but A	構文転換	一般
74	it is no accident that ...	there is a reason why ...	二重否定→肯定	一般
75	in the long run	eventually / over time	同義表現	一般
76	at the expense of ...	by sacrificing ...	平易化	一般
77	give rise to ...	cause / lead to ...	同義表現	一般
78	be at odds with ...	conflict with / contradict ...	同義表現	一般
79	take ... for granted	fail to appreciate ...	否定的言い換え	一般
80	on the rise	increasing	句→1語	一般

APPENDIX 2 — CHECKLIST

長文読解チェックリスト

演習のたびに、終わったあとでこのリストを見直す。☐ に印がつかなかった項目が、そのままあなたの失点の原因である。本番の前日には、このページだけを読み返せばよい。

試験開始〜長文に入る前

- ☐ 大問I・IIの設問文（stem）だけを先に読み、段落番号に印をつけたか（選択肢はまだ読まない）
- ☐ 下線語・引用符つきの語句・人名・研究名を本文中で丸で囲んだか
- ☐ EXCEPT 問題の位置と、タイトル問題の有無を確認したか

段落を読みながら

- ☐ 1段落読み終えるごとに、その段落番号の設問を解いたか（後回しにしない）
- ☐ Yet / However / in other words / not A but B の後ろに線を引いたか
- ☐ 研究は「誰が・何をして・何が分かったか」、比較は向き（＞・＜）をメモしたか
- ☐ 下線語は空欄にして意味を予測し、選択肢を代入して確認したか
- ☐ 比喩・引用は「字義の選択肢」を最初に消したか

選択肢を判定するとき

- ☐ 正解候補は本文の「言い換え」になっているか（本文の語がそのまま並ぶ肢は疑ったか）
- ☐ always / only / completely / never / all などの極端語を本文で確認したか
- ☐ 数字・年代・人名・主語が別の段落・別の研究のものに付け替えられていないか
- ☐ 比較・因果・順序の向きが逆になっていないか
- ☐ 部分的に正しいが設問の焦点（主語・段落）からずれていないか
- ☐ 2つの概念（A と B）の役割が入れ替わっていないか
- ☐ EXCEPT 問題では〇を3つ確認してから×を選んだか

最後に

- ☐ タイトル問題は第1段落の問いと最終段落の答えを1行で書いてから選んだか
- ☐ 1題20分（英文和訳つきの題は＋2分）を超えていないか。超えたら印をつけて次へ進んだか
- ☐ マークのずれ（設問番号と解答欄）を確認したか
- ☐ 正解記号が極端に偏っていても、それを理由に答えを変えなかったか

最後に —— 立教文学部の長文で点を落とさない3原則

1. **根拠は設問が指定した段落の中にある。**段落番号を信じ、その段落の主題文と照合する。
2. **正解は言い換え、誤答は流用。**本文の語がそのまま並ぶ選択肢は、まず寄せ集めを疑う。
3. **極端語・逆・付け替えを先に消す。**残った2肢は、本文の該当文と1語ずつ照らし合わせる。
